Thank you for purchasing this quality Brother product. Please read this manual carefully before operating your printer. It provides valuable tips on operation and information on how to get the most out of the versatility built into every Brother printer.
Note: Always keep this manual in a safe place.

Federal Communications Commission (FCC) Statement

This equipment generates and uses radio frequency energy and if not installed and used properly, that is, in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception. It has been tested and found to comply with the limits for a Class B computing device in accordance with the specifications in Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- reorient the receiving antenna
- relocate the computer with respect to the receiver
- move the computer away from the receiver
- plug the computer into a different outlet so that computer and receiver are on different branch circuits.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet prepared by the Federal Communications Commission helpful:

"How to Identify and Resolve Radio-TV Interference Problems". This booklet is available from the U.S. Government Printing Office, Washington, D.C., 20402, Stock No. 004-000-00345-4.

Shield interface cable must be used according to FCC 15.838D.
This statement will be applied only for printers marketed in the U.S.A.

CONTENTS

WARNING

This printer contains high voltage components. All repairs should be carried out by qualified personnel only.

INTRODUCTION

Your new Brother M-1509 impact dot matrix printer combines high quality and high performance in a compact, lightweight and affordable design that makes it ideal for computer applications for personal or office use. Its reliability and versatility make it the best choice for a high-performance, low-cost printer.

The M-1509 prints at 180 characters per second, but is quiet (less than 58 dB). It uses a stationary ribbon cassette.

The printer accepts both cut forms and fanfold continuous forms with both friction and pin feeds. Forms can be loaded to the specified position with switch panel operations alone. An automatic cut sheet feeder is available as an option.

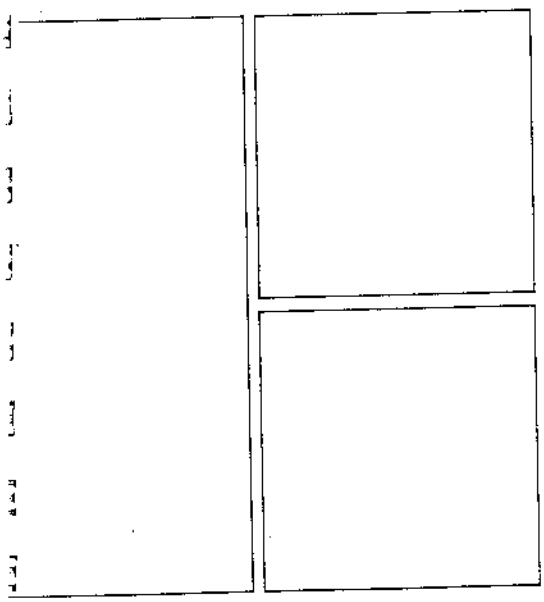
The M-1509 allows the user to print on all but the first inch from the top edge or perforation. This capability can be used to save paper.

The M-1509 provides two plug-compatible modes: Mode I and Mode II — controlled with a DIP switch. This printer provides also a wide choice of eighteen different character sets (including sets for 12 different countries). These character sets can all be combined with various print enhancements: Pica, Elite, Enlarged, Emphasized, Condensed, Sub- and Superscripts, Double-Strike, Underlined, and Near Letter Quality (NLQ). Optional NLQ fonts are also available: Gothic, Quadro, and Anelia Proportional.

The versatile M-1509 can print bit image data defined bytewise by the user in three print densities: Standard, Double, and Quadruple. Also available are two CRT-compatible and two plotter-compatible densities for graphic applications.

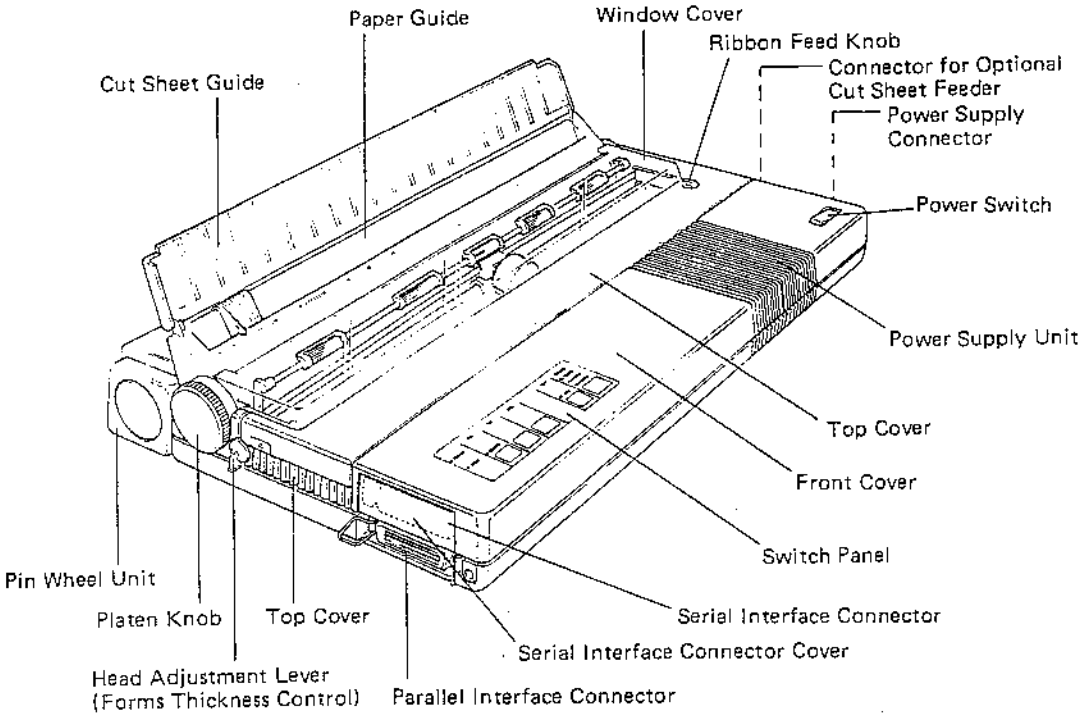
On top of these advanced features, Brother has added a downloading function for loading user-defined character sets and a three kilobyte (3k) buffer.

The M-1509 is equipped with both parallel and serial interfaces.



Chapter 1.
GETTING STARTED

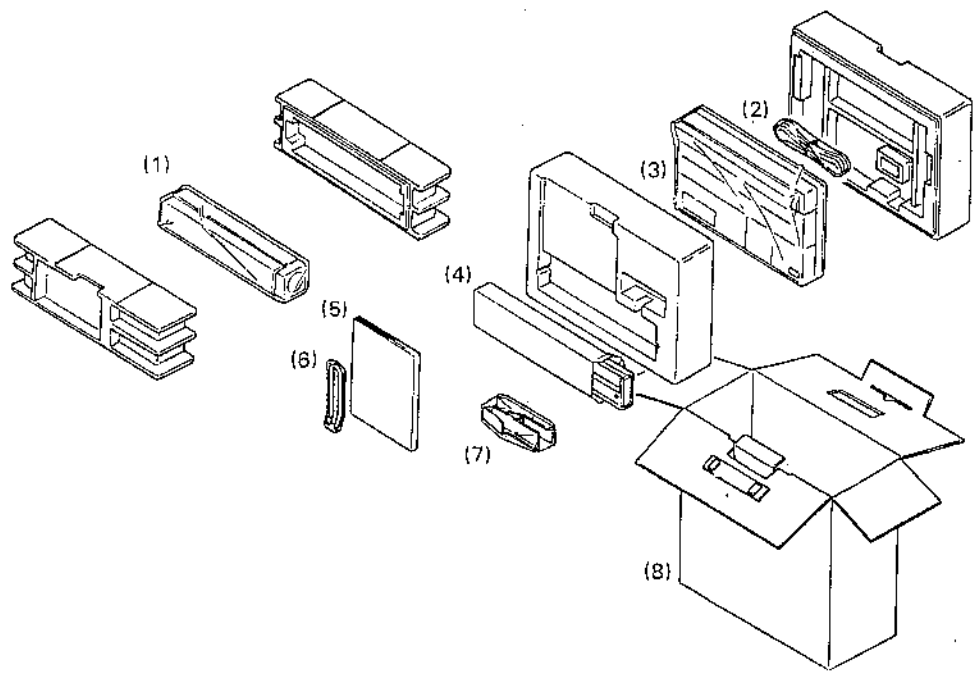
1.1 Names of Sections



1.2 Checking Contents

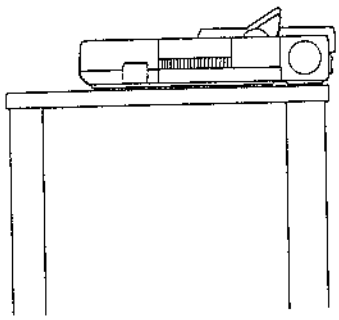
Take your printer out of the carton and check the contents.

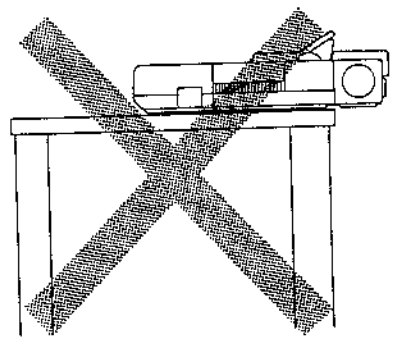
(1) Pin Wheel Unit
(2) Power Cord
(3) Printer
(4) Ribbon Cassette (Stationary type)
(5) Owner's Manual (This booklet)
(6) Latch Attach/Remover
(7) Position Guides
(8) Carton



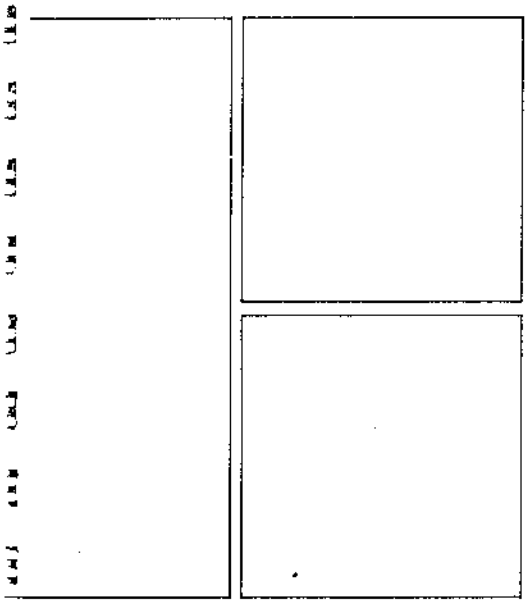
1.3 Site Location

- Place the printer on a flat, firm surface. Make sure that any section of the printer including the Pin Wheel Unit (if installed) does not protrude from the printer stand or the table.





- Shield the printer from sources of heat – direct sunlight and heating equipment, for example – humidity, vibration, and electrical noise.
- Do not use the printer in an environment where it may be subjected to wind-borne dust, oil, grease, or iron filings.
- Do not use the printer in the same circuit with large electrical motors or other sources of line noise.
- Do not subject the printer to rapid temperature changes or operate it outside the specified temperature range (5°C – 35°C).
- Use only the power supply specified on the seal at the back of the printer. An incorrect voltage or frequency will interfere with operation and damage the electrical components.
- Make sure that the platen knob is unencumbered and free to turn throughout operation.



Chapter 2.
SETTING-UP

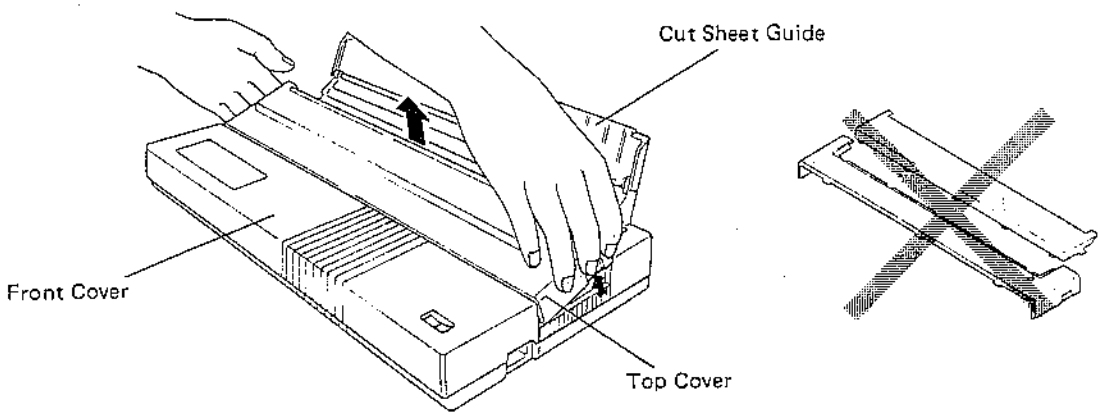
2.1 Installing and Removing Ribbon Cassette

■ Installing

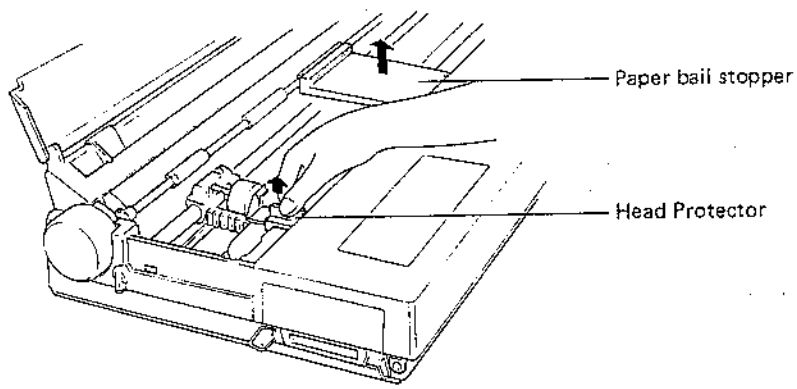
Your printer is shipped with a head protector and a paper bail stopper attached to protect it from shocks during transport. Be sure to remove them before use.

(1) Open the cut sheet guide.

(2) Pull and detach the top cover, putting your hands on both sides. Take care not to pull the window cover by force; otherwise, it may be broken.



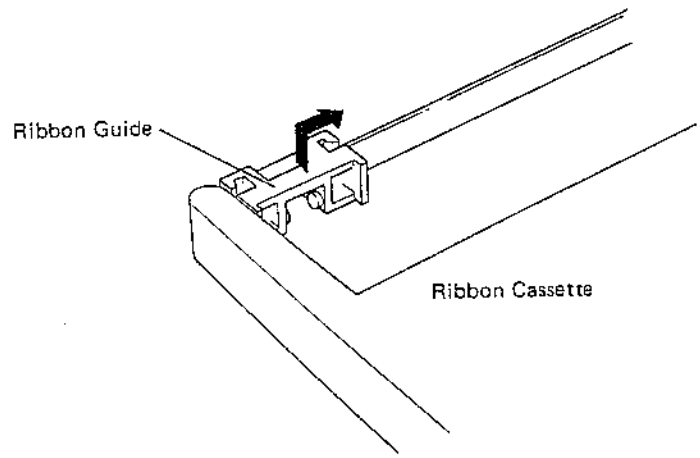
(3) Take off the paper bail stopper and the head protector which protects the print head from damage due to shocks during transportation. For possible future use, store them.



It is recommended that you save all of the packing materials — especially the head protector and the paper bail stopper — for possible future use.

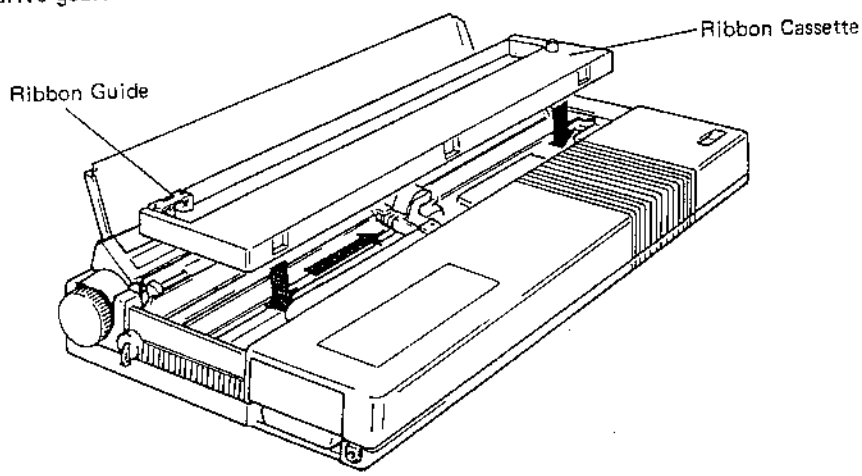
(4) Confirm that the POWER switch is turned OFF.

(5) Pull up the ribbon guide from the cassette.

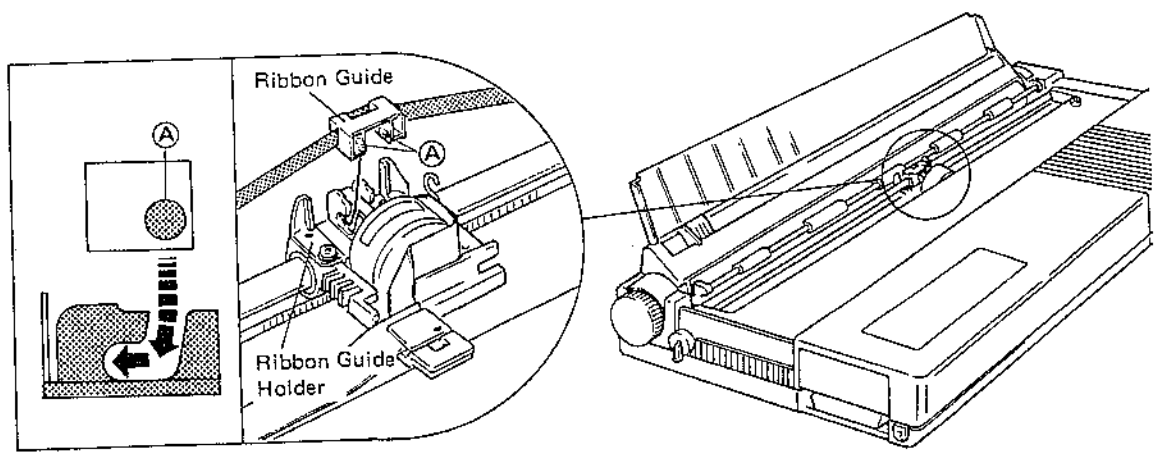


(6) Move the carriage to the center of the frame.

(7) Place the cassette on the frame unit so that the hole located on the ribbon cassette engages the ribbon drive gear.

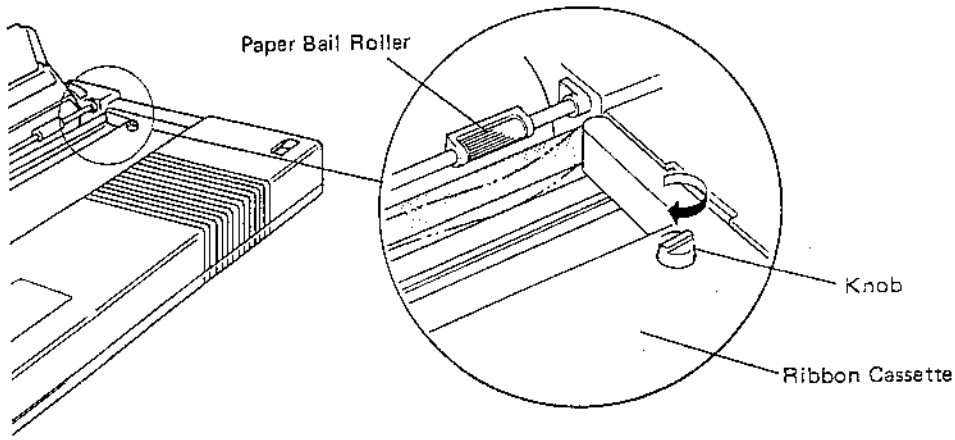


(8) Place the ribbon guide onto the ribbon guide holder and push it forward until it clicks.



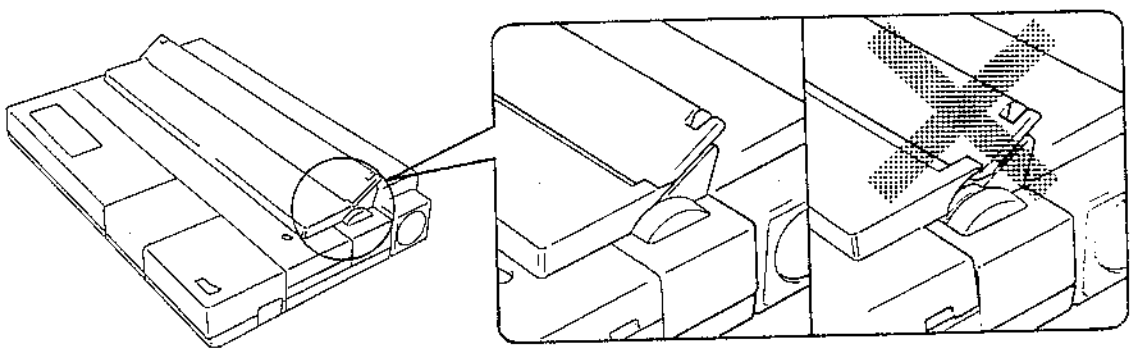
(9) Turn the blue knob on the cassette clockwise to remove slack of the ribbon.

- Ribbon slack may result in poor print quality and the damage of the platen and print head.



(10) Reposition the top cover.

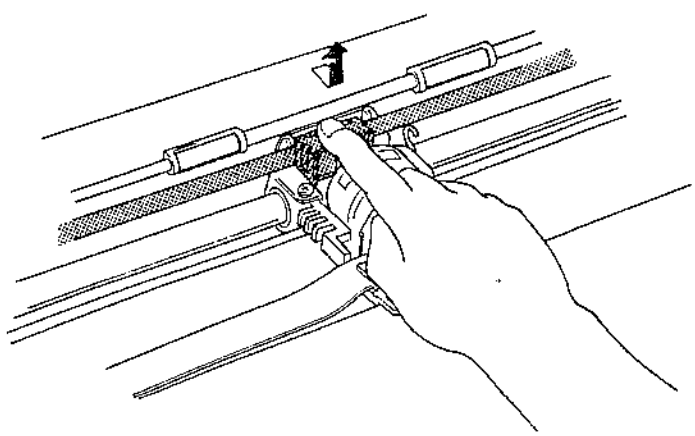
(11) Close the cut sheet guide.



■ Removing

To remove the ribbon cassette, reverse the installation procedure.

- Pulling up the ribbon guide while tilting slightly toward you makes it easy to remove the ribbon guide.



2.2 Loading Forms

With this printer, the printing can be done either on continuous forms or on cut forms. When only cut forms are used, there is no need to install the pin wheel unit to the printer.

2.2.1 Continuous Forms

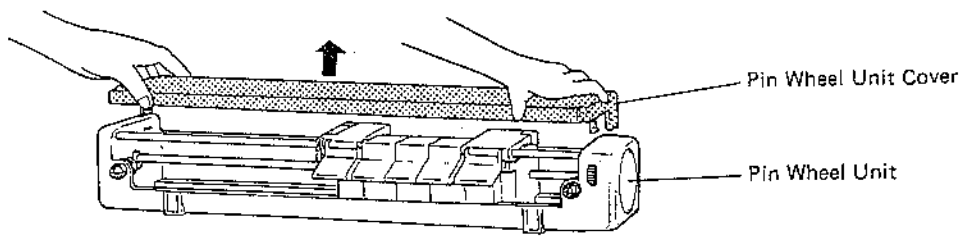
Continuous forms cannot be used simultaneously with cut forms in the printer.
To use continuous forms, first install the Pin Wheel Unit on the printer unit, following the instructions described below.

<Installation/Removal of Pin Wheel Unit>

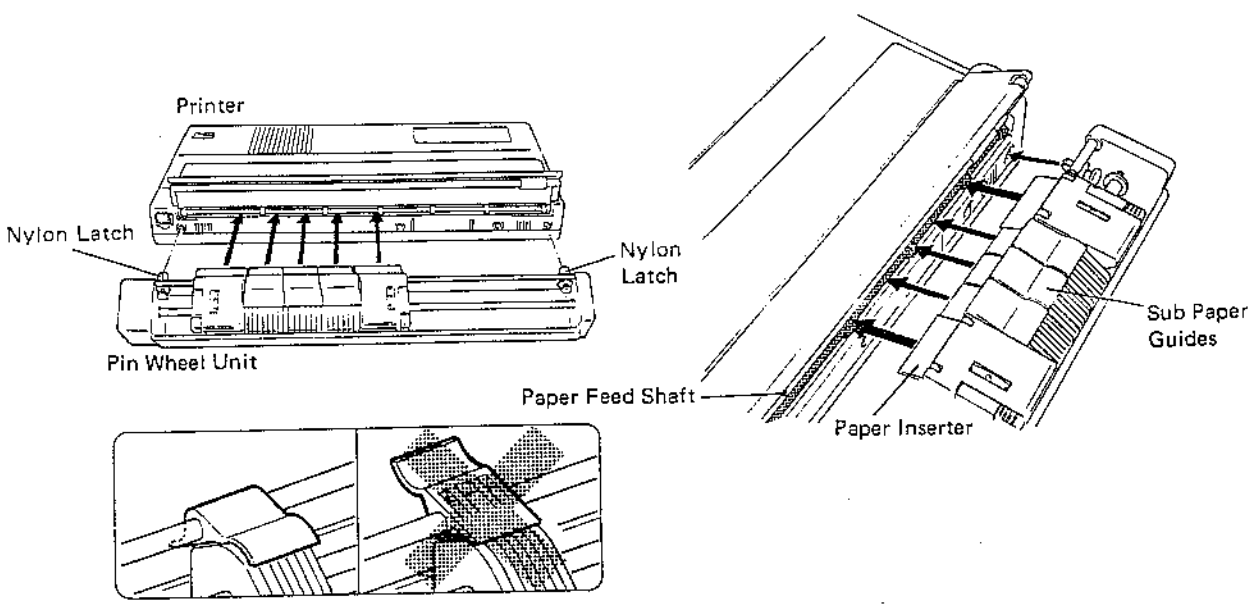
■ Installing

(1) Turn the POWER switch to OFF position.

(2) Remove the pin wheel unit cover, by pulling it backward or upward.

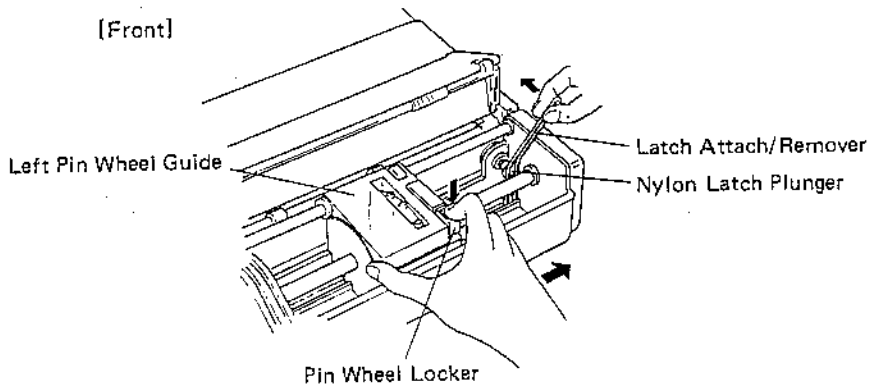


(3) Insert the nylon latches into the holes on the rear side of the printer, introducing the paper inserters and sub paper guides into the slit between the paper feed shaft and the frame.



(4) Push the plungers until a clicking sound is heard, using a latch attach/remover or by fingertip.

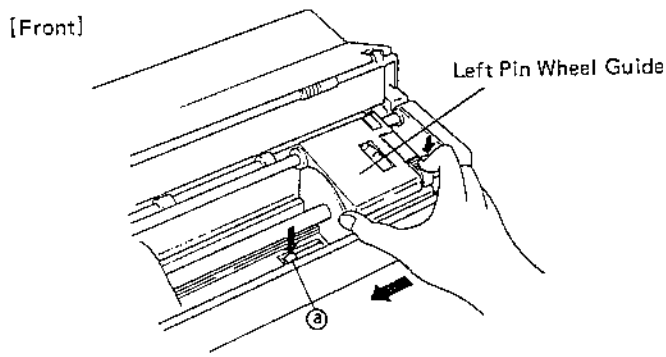
(5) Holding down the pin wheel locker, move the left pin wheel guide rightwards, as shown below.



(6) Reposition the pin wheel unit cover.

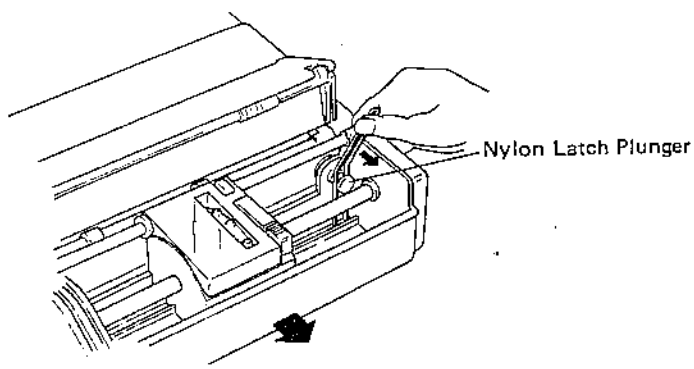
■ Removing

(1) Pushing down the pawl ⓐ, slide the left pin wheel guide leftwards, as shown below.



(2) Pull each of the nylon latch plungers toward the rear of the printer using a latch attach/remover.

(3) Take off the pin wheel unit from the printer.

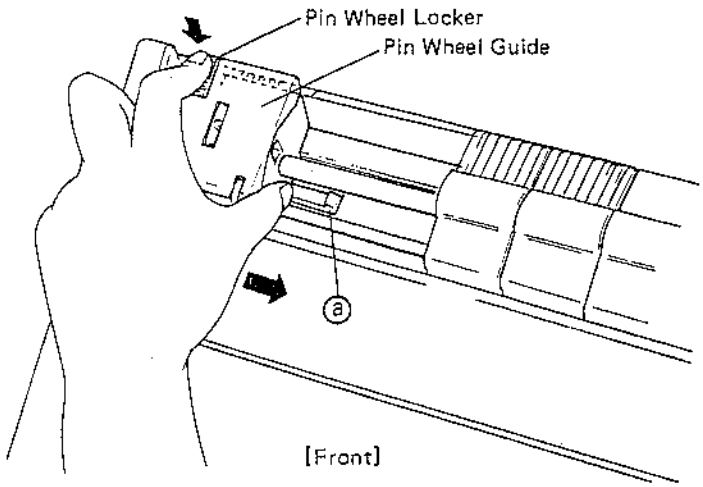


<Paper Loading>

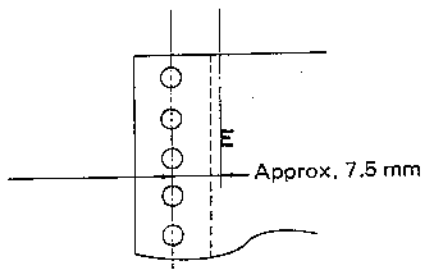
After installing the Pin Wheel Unit, load continuous forms taking the following steps:

(1) Remove the pin wheel unit cover and the position guides (if installed) from the cut sheet guide.

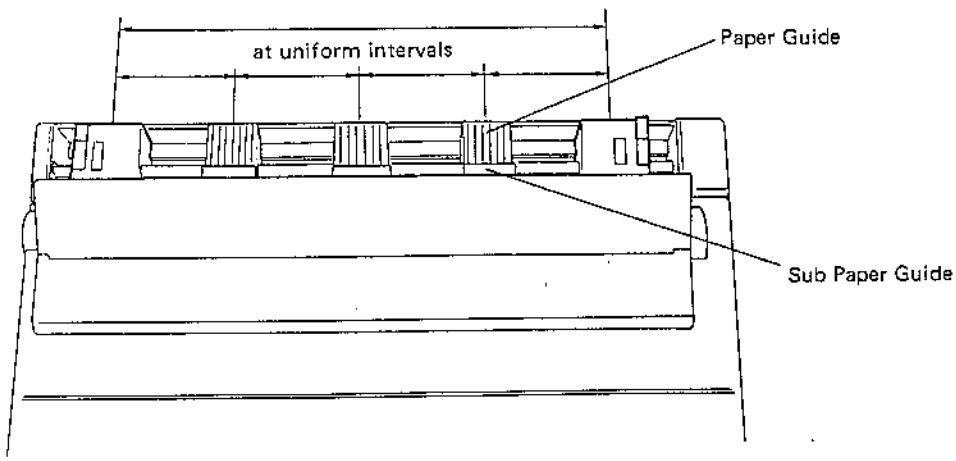
(2) Adjust the right and left pin wheel guides while holding down each pin wheel locker in accordance with the paper width.



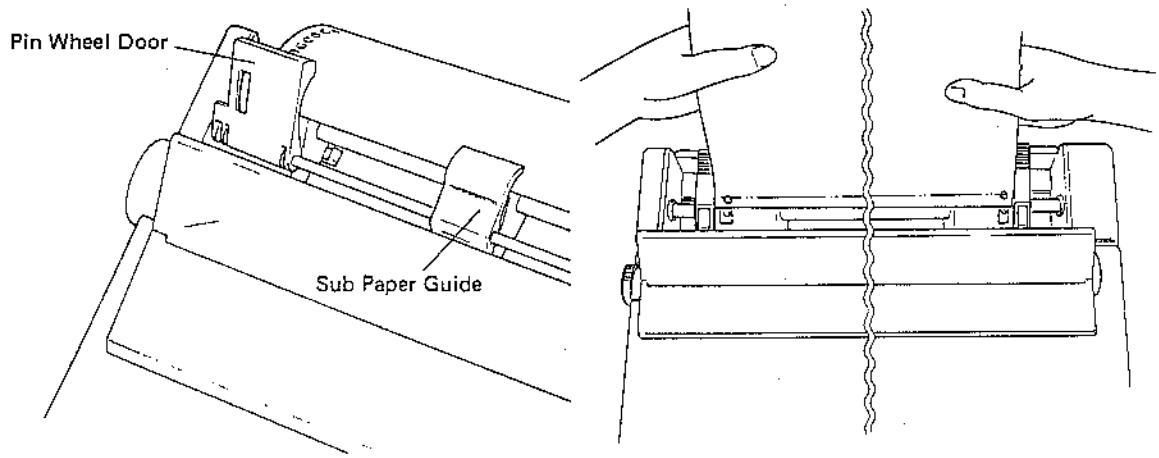
- When the left pin wheel guide is locked against the pawl ⓐ, the distance between the center of the sprocket holes and the left edge of the first print position is approximately 7.5 mm, as shown below.



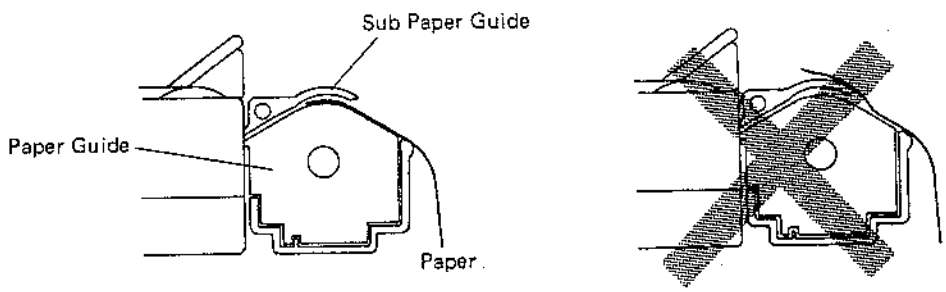
(3) Be sure to move the three paper guides and sub paper guides to their proper positions. Otherwise, paper jam may result.

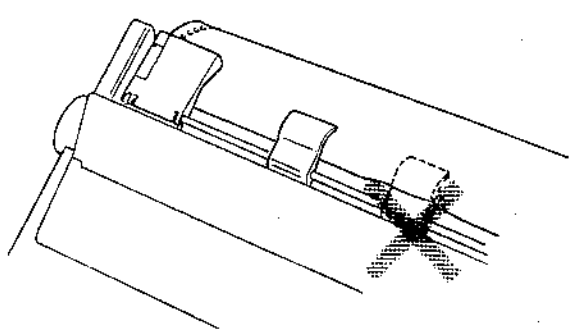


(4) Open the pin wheel doors and engage the sprocket holes of the paper on the pins.



- Be sure to insert the leading edge of the paper into the slip between the sub paper guides and the paper guides.





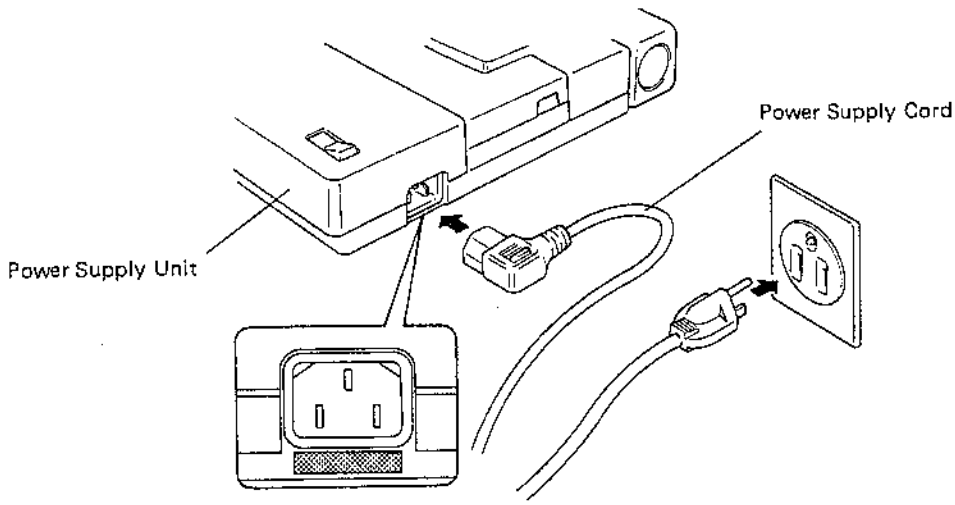
- Make sure that the paper is not skewed, and that the paper tension is neither too loose nor too tense.

NOTE: Take care not to make the paper reach under the platen. If so, the automatic paper insertion does not function.

(5) Close the pin wheel doors completely.

(6) Reposition the pin wheel unit cover.

(7) Make sure that the printer is turned off. Put the coupler of the power cord into the power supply connector at the right side of the printer and then connect the power cord to the AC outlet.
Before actually loading the paper, set the head adjust lever to the desired position according to the number of copies to be printed. See "Head Gap Adjustment" on page 14.

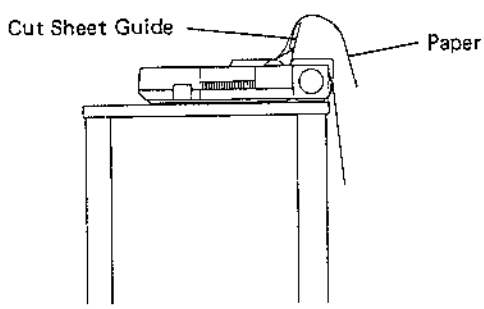


(8) Turn the POWER switch to ON position.

(9) Press the LOAD switch until the FORMS lamp comes on.

(10) Press the TOF switch, and the paper will be fed automatically.
NOTE: When the SEL lamp is already on, the automatic paper insertion cannot be performed.

(11) Close the cut sheet guide. It is, however, recommended that you use the printer with the cut sheet guide kept open when you cut the continuous paper frequently.

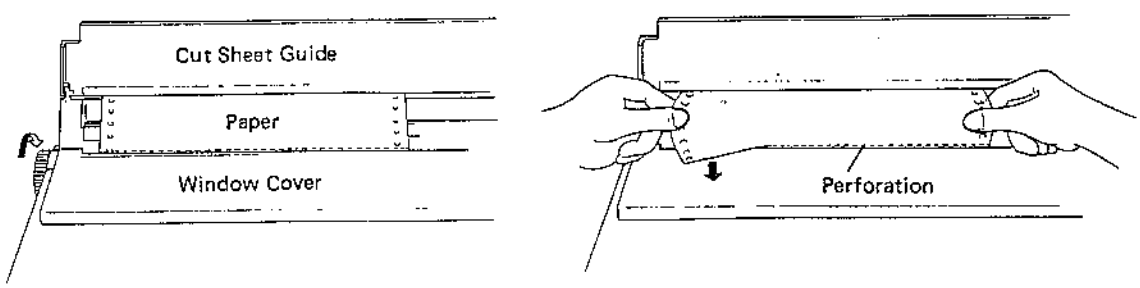


<Paper Cut>

(1) Open the cut sheet guide.

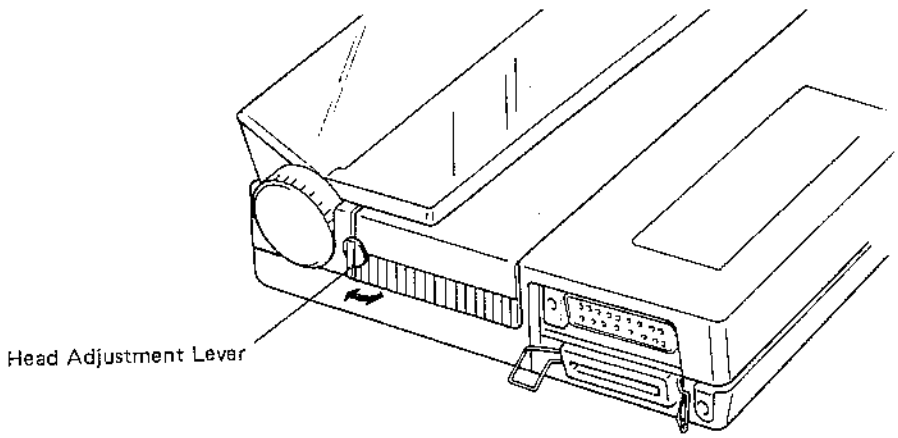
(2) Align the perforation to the window cover.

(3) Pull out the paper with your finger to cut it at the perforation.



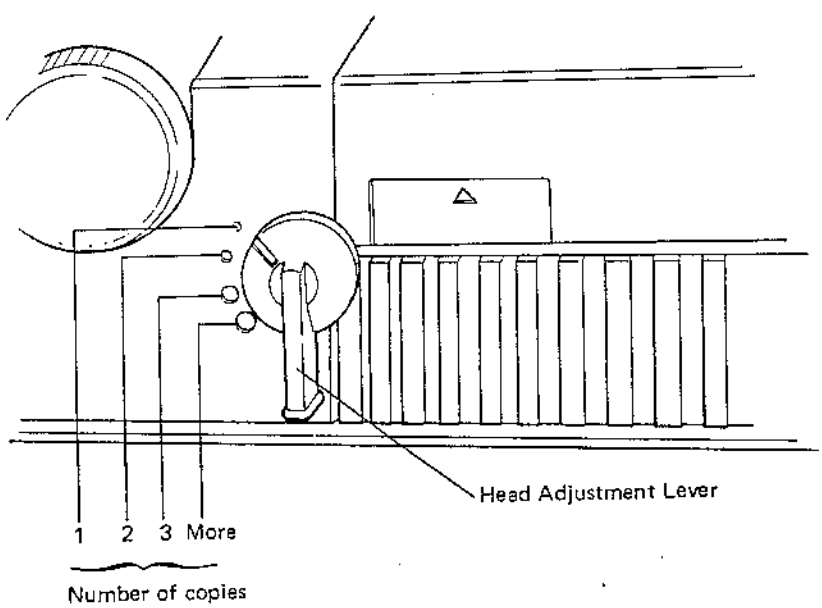
<Head Gap Adjustment>

It is necessary to adjust the gap between the print head and the platen, in accordance with the number of copies to be printed, using a head adjustment lever.



The relation between the number of copies and the lever set position is shown below.

- Depending upon the thickness and quality of paper used, discrepancy may occur, so adjust accordingly.
- If paper is smudged with ink, turn the head adjustment lever counterclockwise to widen the gap.
- Do not print with an excessively large head gap. Otherwise, the head life will be shortened.



< Note for Continuous Paper Supply >

(1) If the paper is in a box, remove the upper flaps or secure them out of the way.

(2) Position the box so that the paper feeds straight into the printer.

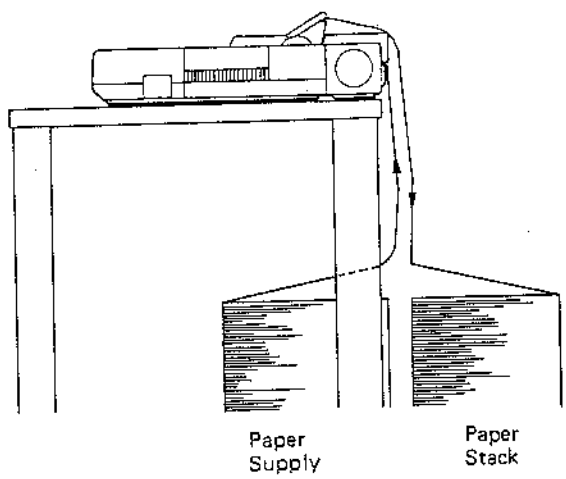
(3) If possible, firmly secure the box holding the paper in position.

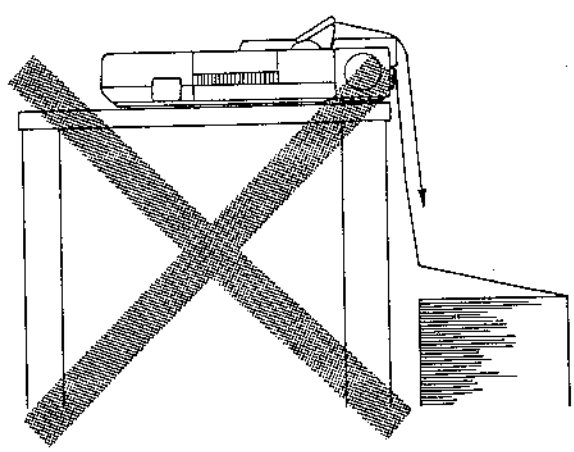
(4) Make sure that the box is level and that the paper does not lean to one side.

(5) Make sure that nothing impedes the paper's progress.

(6) Be extra careful in a humid environment or during the rainy season. Excessive humidity may cause the paper to breach or alter the line spacing.

Place the box of paper under the printer, as illustrated below. Make sure that the paper does not touch edges, corners, or anything else that may impede its progress through the printer's paper feed mechanism.

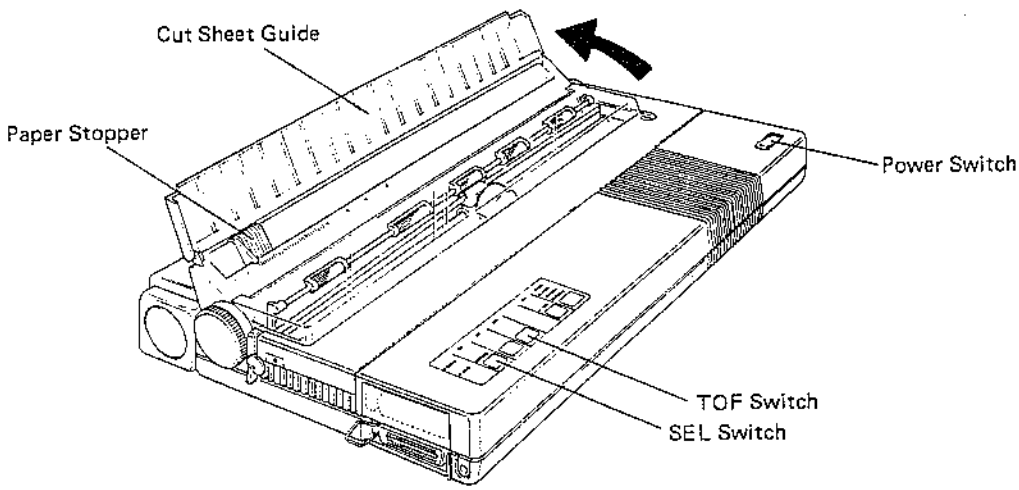




2.2.2 Cut Forms

Cut forms cannot be used with a continuous form in the printer. Remove the continuous form with the following procedure:

1) Cut the continuous forms along the perforations nearest the window cover.
2) Take the printer offline by pressing the SEL switch.
3) Press the LOAD switch until the SHEET lamp comes on.
4) Press the TOF switch to eject the paper backward from the printer.



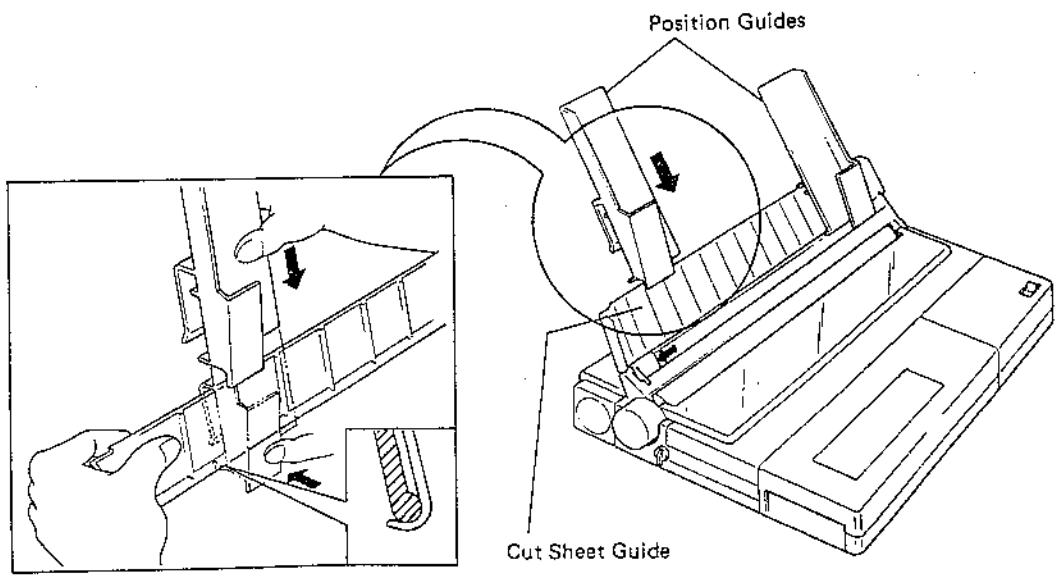
The position guides prevent cut forms from skewing. Install with the following procedure:

<Installing the Position Guides>

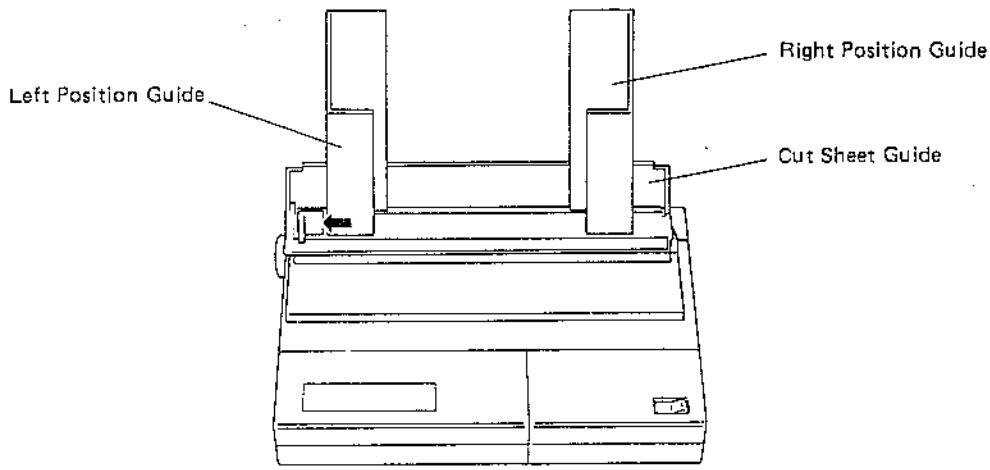
(1) Flip the cut sheet guide up.

(2) Make sure that the paper stopper is at the left end of the paper guide.

(3) Install the position guides onto the cut sheet guide slowly so as not to let the cut sheet guide come off the printer but securely until they click. See the following figure.



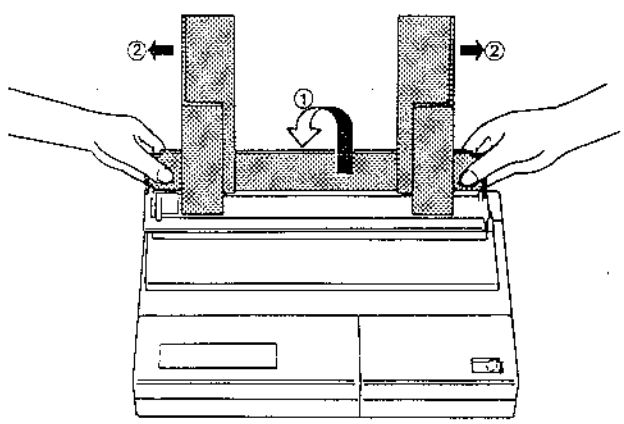
(4) Adjust the left and right position guides to match the form width.
Be sure to read "Position of Print Characters and Paper Guide Scale" on page 19.



< Removing the Position Guides>

(1) Detach the cut sheet guide with care.

(2) Remove both position guides from the cut sheet guide as shown below.



(3) Put back the cut sheet guide in place.

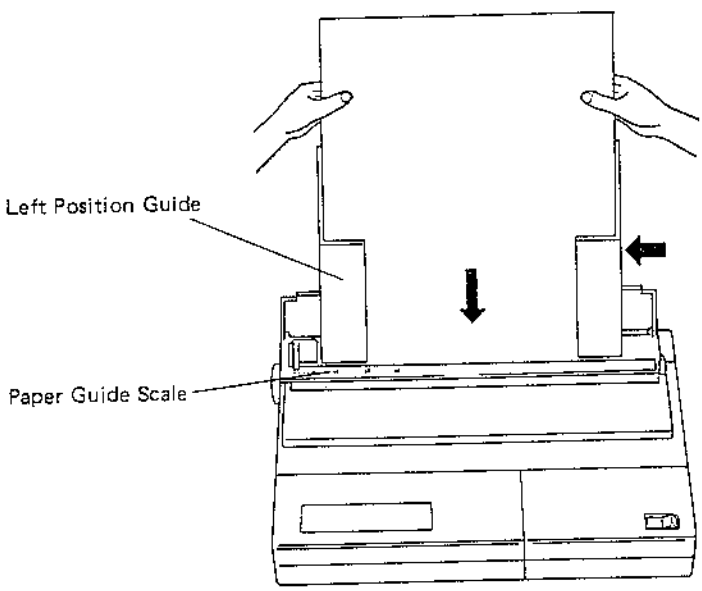
<Paper Loading>

(1) Turn the POWER switch to ON position.

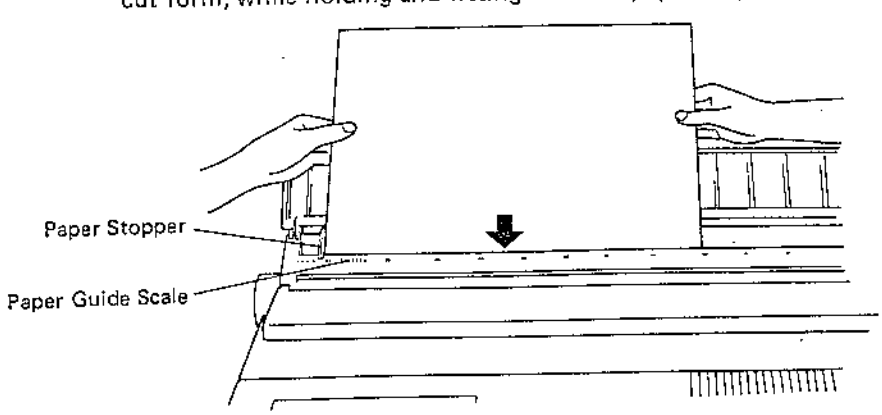
(2) Set a cut form to the printer.

- Before setting the cut form, confirm that the CHECK lamp is on. If the lamp is off – for example, the cut form is ejected by turning the platen knob or by pulling it out manually, press the LF switch or the TOF switch until the lamp comes on.
- Do not use folded, torn or creased forms, as they may degrade print quality or the paper may jam.
- See "Position of Print Characters and Paper Guide Scale" on page 19.

When the position guides are installed;
Be sure to check the location of the left position guide and confirm the beginning of printing, referring to the paper guide scale. Then insert a cut form between the position guides and press lightly until it stops.



When the position guides are not installed;
Move the paper stopper to the desired position, referring to the paper guide scale. Then set a cut form, while holding and fitting it to the paper stopper with both hands.



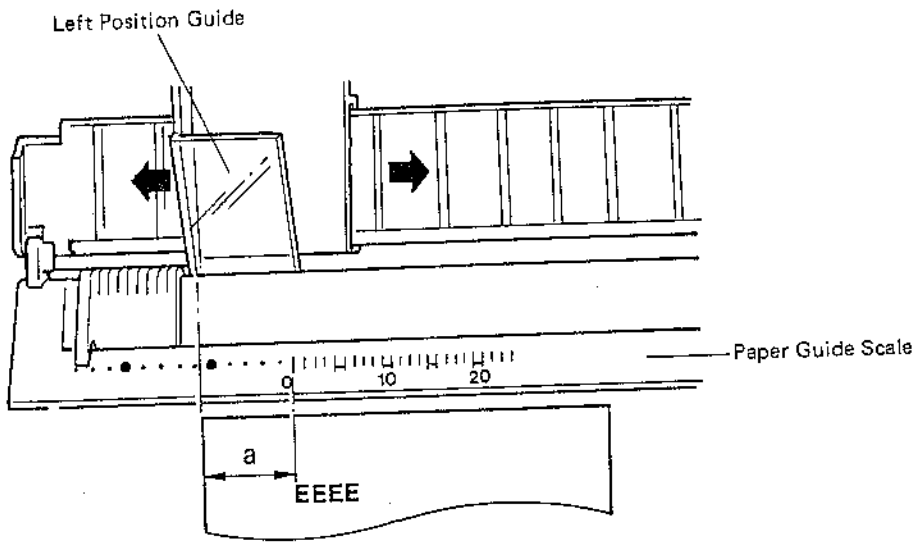
(3) Press the TOF switch while keeping the paper so as to be fed straight and neatly to the specified first print position.

<Position of Print Characters and Paper Guide Scale>

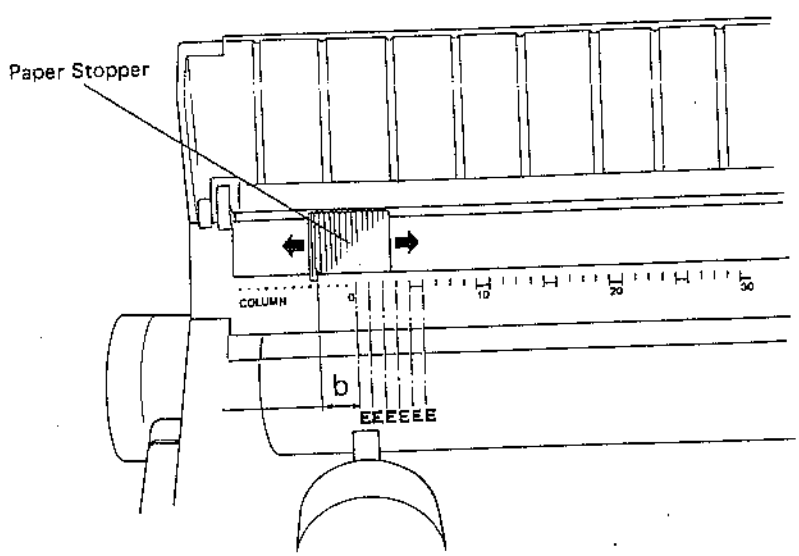
The graduations on the paper guide scale are aligned with the left edge of the printed characters.
Use the paper guide scale as a guidepost when loading paper.

Printing begins at the zero point of the scale.
Adjust the left position guide or the paper stopper to obtain the desired left margin.

When the position guides are used; a = Left margin

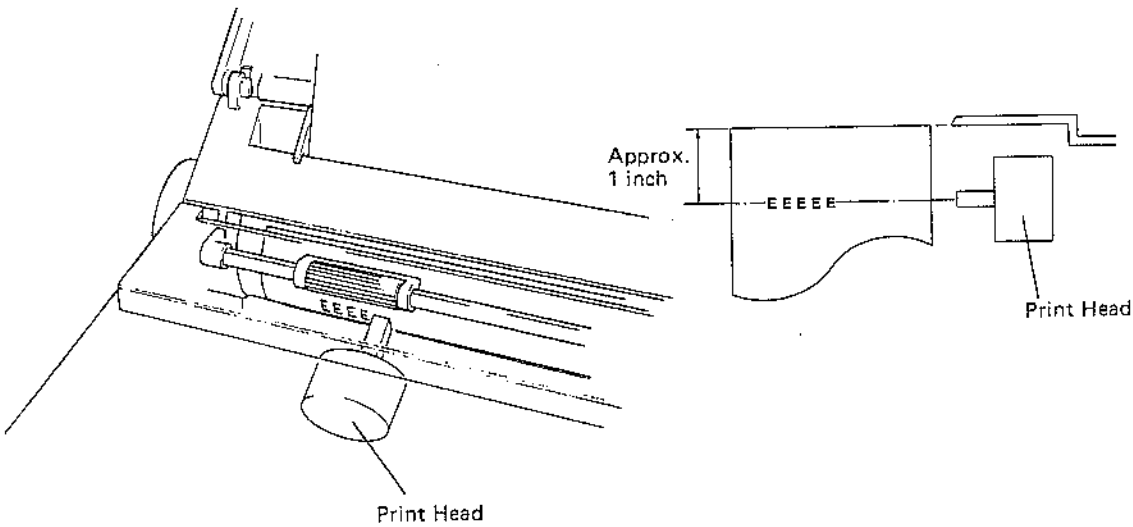


When the position guides are not used; b = Left margin



2.2.3 Relation of the First Print Line and the Top Edge of the Paper

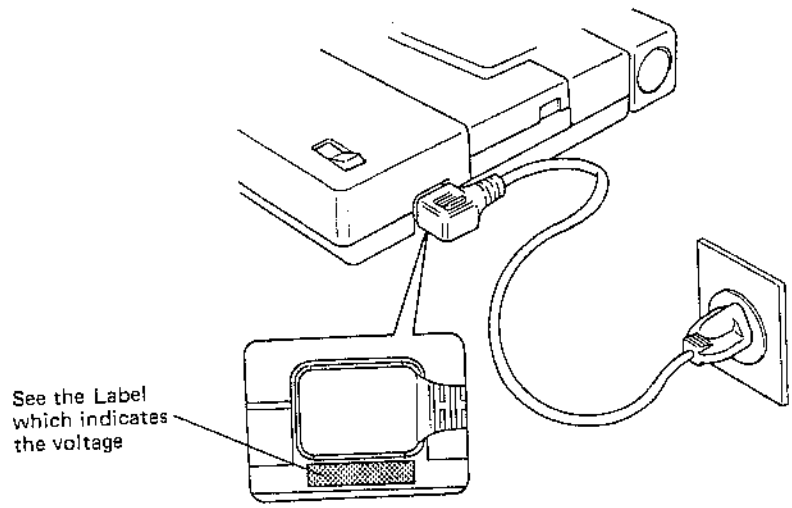
Pressing the TOF switch loads forms to the specified position. The paper automatically stops so that the first print line is approximately one inch from the top edge or perforation.



2.3 Connecting to Computer

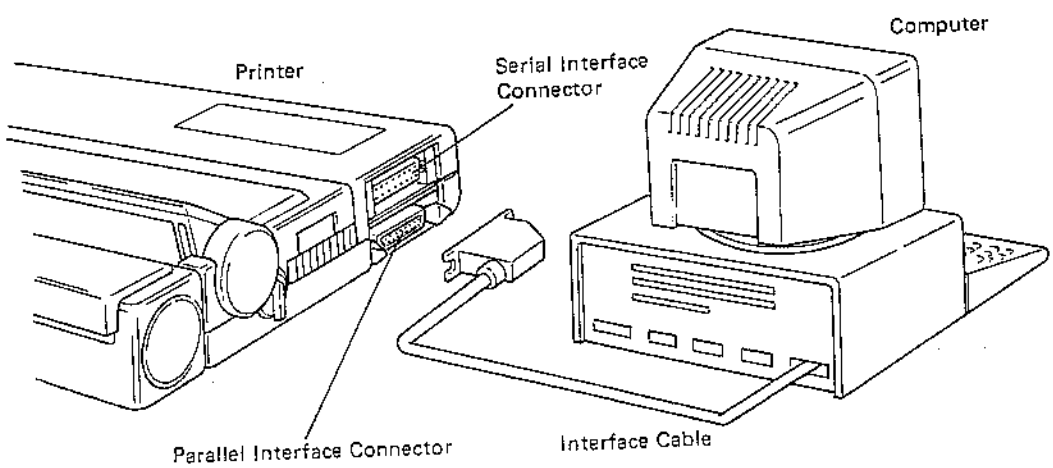
(1) Make sure that the printer and computer are turned off.

(2) Check the AC voltage, referring to the lower part of the power inlet. And make sure the printer is connected to the AC outlet with the power cord.



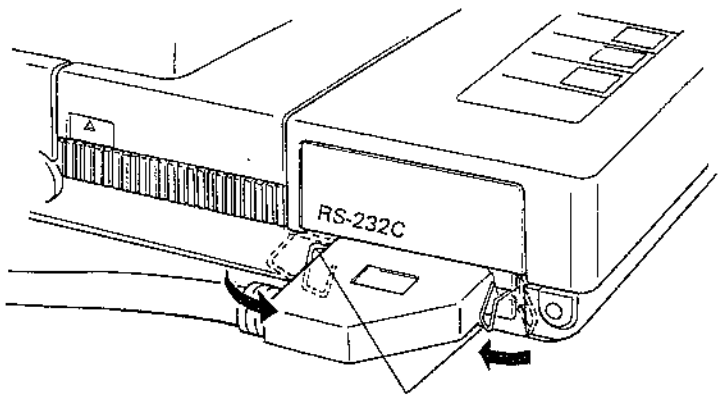
(3) Connect the interface cable to the printer securely.

Your printer is equipped with both Centronics parallel and RS-232C serial interfaces. Select the proper interface and connect it, following the instructions described below.



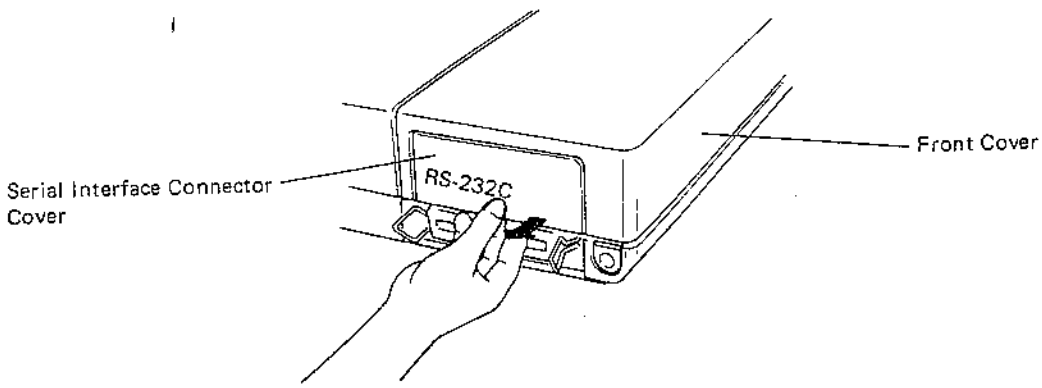
■ Parallel Interface (Set DIP SW1-8 to OFF. See the description of the DIP switch.)

Connect the interface cable to the parallel interface connector located on the left side of the printer.

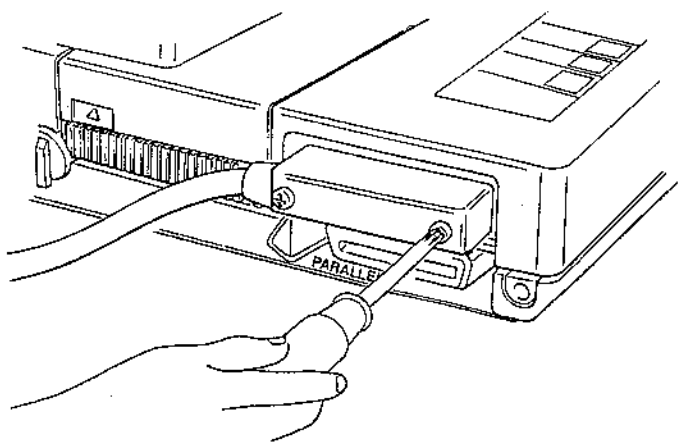


■ Serial Interface (Set DIP SW1-8 to ON. See the description of the DIP switch.)

(1) Remove the serial interface connector cover from the front cover.

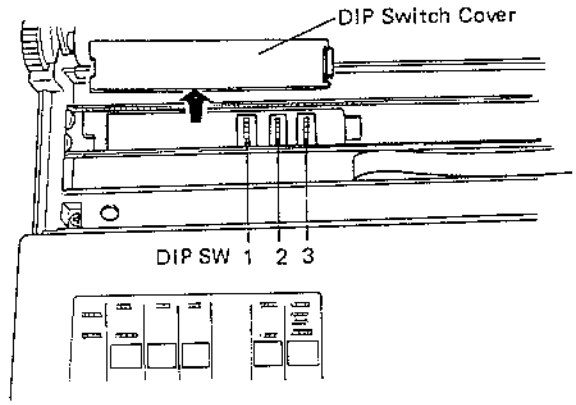


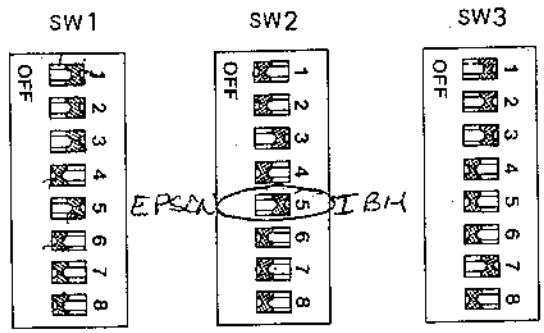
(2) Connect the interface cable to the serial interface connector and lock it, using a screwdriver.



2.4 Setting DIP Switches

The Dual In-Line Package (DIP) Switches on this printer control various aspects of printer operation. The printer has three DIP Switches, SW1, SW2 and SW3. Each of the eight selectors on a DIP SW serves a particular purpose, described on the following pages.

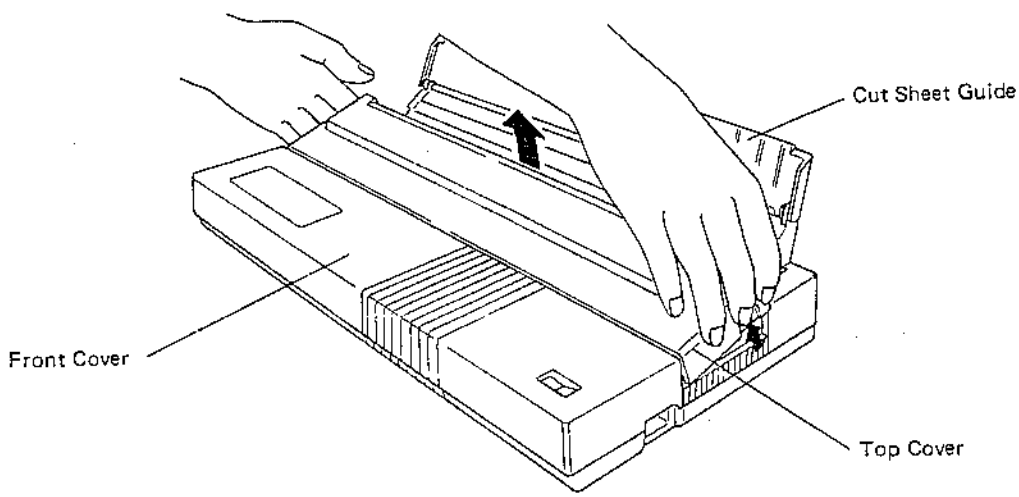




NOTE: The illustration above shows the DIP switch settings of the machine as delivered. For further information, see pp. 24 ~ 28.

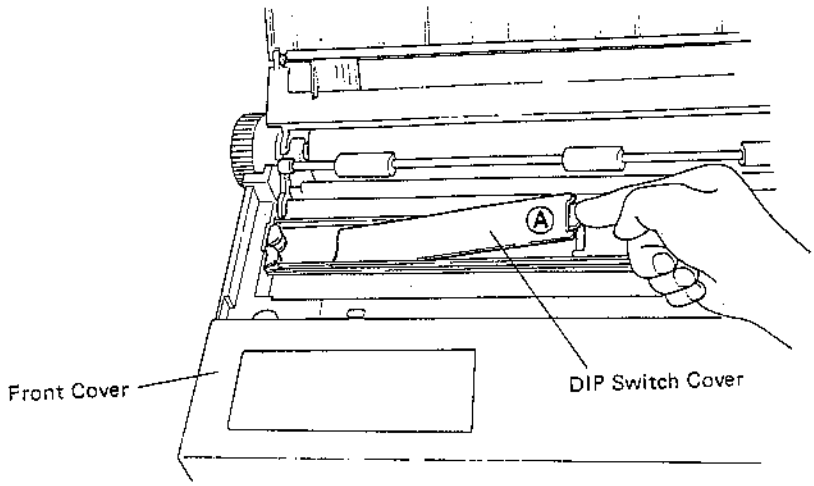
These switches are located on the Logic Control Circuit Board beneath the DIP switch cover under the timing belt. To change a setting,

1) Unplug the power cord from the AC outlet.
2) Open the cut sheet guide.
3) Pull and detach the top cover, putting your hands on both sides. Take care not to pull the window cover by force; otherwise it may be broken.



4) Move the carriage to the right side.
5) Remove the ribbon cassette, if installed.

6) Pushing the DIP switch cover at portion Ⓐ leftwards with your fingertip, pull it up and off the printer.



7) Press the selector with tweezers, a small screwdriver, or any similar pointed object.

NOTES:
- The switches have been set at the factory. Do not disturb them unless necessary.
- Always double-check switch and selector numbers.
- Do not let any foreign objects fall onto the circuit board under the DIP switch cover when removing the cover.
- Do not forget to replace the DIP switch cover.

SW2-5, selector 5 of SW2, switches the printer between the Mode I and Mode II.* When the printer leaves the factory, it is set up for Mode II – that is, with this switch ON. Turning this switch OFF changes to the Mode I, a mode which assigns a different set of meanings to the selectors 1 to 4 on SW3 and to the control codes as well.

* Mode I : Epson-compatible mode
Mode II : IBM-compatible mode

IMPORTANT:
The data sent from the computer may not be valid according to the setting of DIP switch. See the DIP SW1-8 and the DIP SW3-7.

NOTE 3: For Norway, Finland, Denmark and Sweden specifications, this switch is set to ON.

NOTE 4: For Norway specifications, this switch is set to ON.

NOTE 5: When set to OFF

- The input data is not valid unless the low signal is input to the pin 36 ($\overline{\text{SLCT IN}}$) of the parallel interface connector; the printer receives but ignores the data.
- In case of MODE I (DIP SW2-5: OFF), if the DC1 code (11H) is input, the data input after the DC1 code are valid. And if the DC3 code (13H) is input, the data input after the DC3 are invalid. At power on, the printer is in the state of data ignorance.

When set to ON

- The data are valid regardless of the state of the pin 36 ($\overline{\text{SLCT IN}}$) of the parallel interface connector; however, the DC1 and DC3 codes are ignored under MODE I.

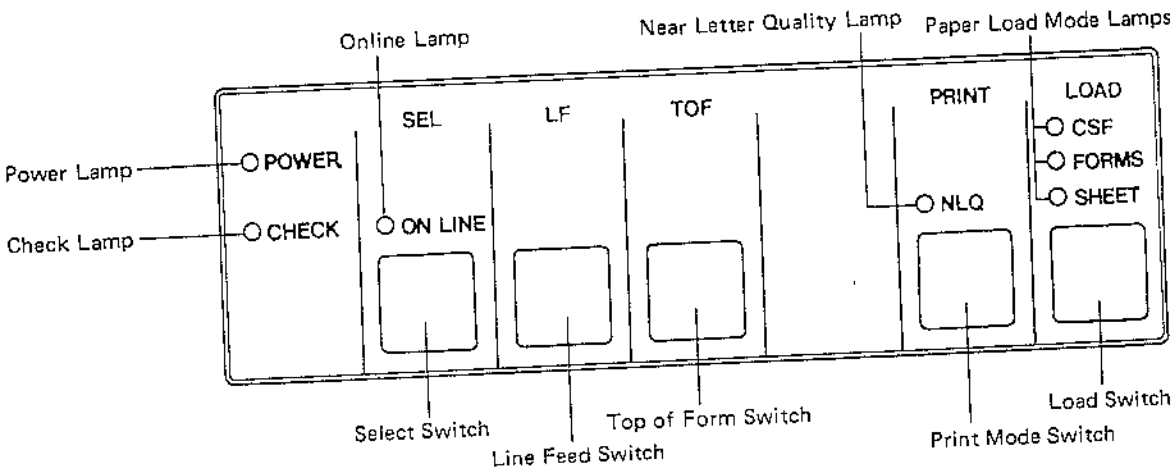
Chapter 3.
OPERATION

3.1 Switch Panel

The switch panel, located at the front of the printer, has the layout shown in the illustration below. The switches and lamps operate as described below.



■ Switches

• SEL (Select) Switch

Controls the printer's connection to the computer. At power on, the printer goes online automatically if no error is detected. Each time this switch is pressed, the printer enters the online or offline mode alternately.

• LF (Line Feed) Switch

Pressing this switch once advances the paper by one line. Continued pressure produces continuous feeding. This switch is operational only while the printer is in offline mode.

• TOF (Top of Form) Switch

Pressing this switch when the paper is ready to advance feeds the paper by the preset form feed length. If this switch is pressed when the paper has been printed to its middle, the printer operates as follows, depending upon the paper load mode selected.

- Ejects the printed paper if the SHEET mode is selected.
- Feeds the paper to the top of the next page if the FORMS mode is selected.
- Ejects the printed paper if the CSF mode is selected.
  (See the owner's manual for the cut sheet feeder.)

This switch is operational only while the printer is in offline mode.

• PRINT Mode Switch

At power on, the printer selects the Draft mode automatically. Pressing this switch toggles between the Draft and NLQ modes. This switch is operational only while the printer is in offline mode.

• LOAD Switch

At power on, the SHEET mode lamp lights. Each time this switch is pressed, the paper load mode changes in order of FORMS, CSF, and SHEET modes.

■ Indicators

• POWER Lamp (red)

Comes on when the POWER switch is turned ON.

• CHECK Lamp (red)

Indicates an abnormality in the printer. This lamp comes on when no paper is loaded in the printer or any error status is detected. If any error occurs on automatic insertion or rejection of forms, this lamp blinks on and off. While this lamp lights or blinks, no printing can perform.

• ON LINE Lamp (green)

Indicates that the printer is in the SELECT state. This lamp lights when the printer is ready to accept data or receiving data, or when the data is stored in the print buffer.

• NLQ (Near Letter Quality) Lamp (yellow)

Comes on when the printer is in the NLQ print mode and goes out in the Draft print mode.

• CSF, FORMS, SHEET (Paper Load Mode) Lamps (yellow)

One of these three lamps lights each time the LOAD switch is pressed. Each lamp indicates the paper load mode as follows:

CSF : Cut Sheet Feeder mode (if optional Cut Sheet Feeder is installed.)
FORMS : Pin Wheel mode (for continuous forms)
SHEET : Manual insertion mode (for cut forms)

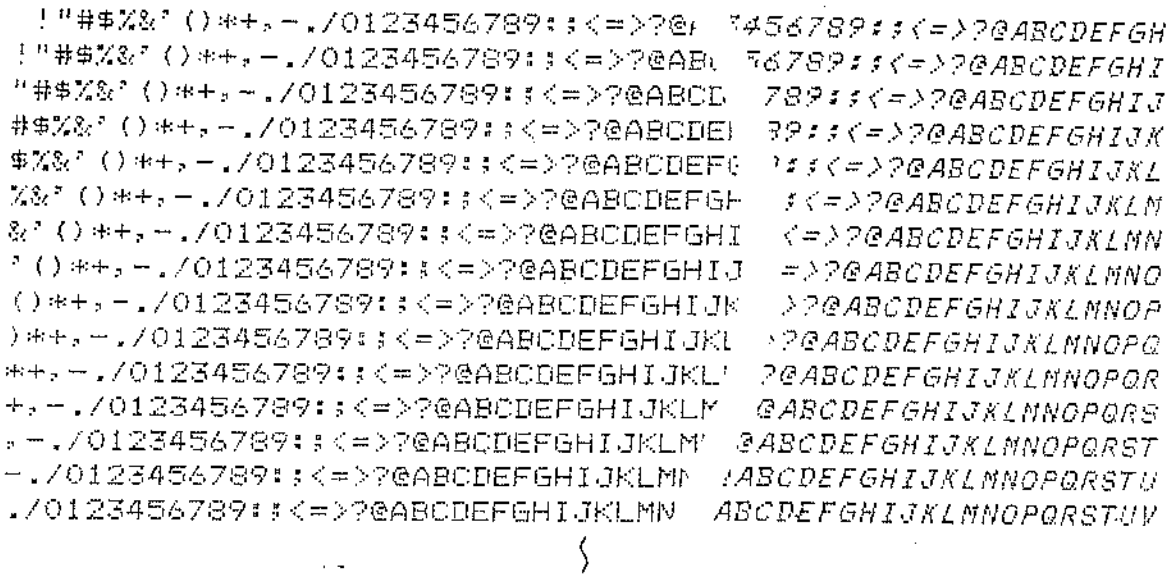
The CSF, FORMS, and SHEET lamps blink on and off if carriage error, RAM error, and ROM error occur, respectively.

3.2 Performing Self Test

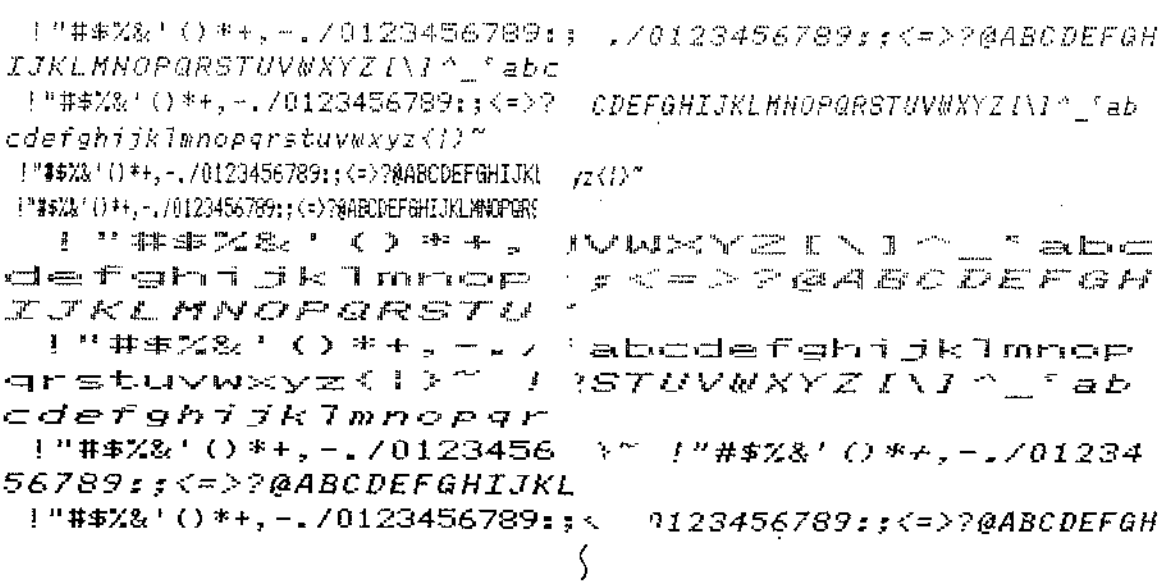
The self test is performed without connection to the computer in order to check the printing function and quality.

(1) Press the TOF switch to load the paper. However when the cut sheet feeder SF-40 is used, there is no need to press the TOF switch; the paper is automatically loaded to perform the self test with the 6-inch margin width.

(2) Turn the POWER switch ON while pressing the LF switch, and all characters in the ROM are printed out.



(3) Turning the POWER switch ON with the PRINT mode switch held down starts the printing of test patterns in Condensed, Emphasized, Double-Strike and other print modes.



NOTE: The self test is terminated when the POWER switch is turned OFF or the printer runs out of paper.

3.3 Hexadecimal Dump and Other Functions

HEX

■ Hexadecimal Dump

This diagnostic function prints the data transmitted from the computer in hexadecimal form.

Turn the POWER switch ON while pressing both the LF and ON LINE switches.

- The moment the buffer becomes full, the hexadecimal dump (print) will start.
- To start the hexadecimal dump (print) before the buffer becomes full, press the ON LINE switch again to take the printer offline.

NOTE: To terminate this operation and restore the normal print mode, turn the POWER switch OFF and then ON again.

Sample Program

```
1  LPRINT CHR$(27);"E";"HEX.DUMP";
10 END
```

Print Example

```
1B 45 48 45 58 2E 44 55 4D 50 0D 0A
```

■ Home Positioning

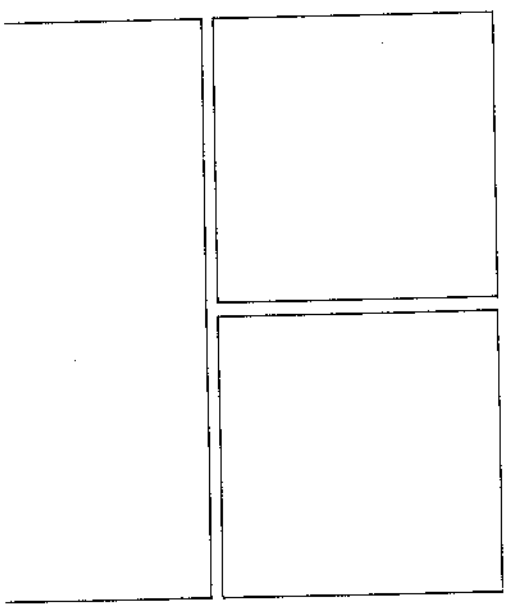
This function automatically returns the carriage to the home position when the power is first applied.

■ Paper Empty (PE) Detection

When this function detects the end of paper, it lights the CHECK lamp, stops the printing, and switches it offline. To continue printing, load forms and press the ON LINE switch.
The ON LINE switch is disabled until the PE state is cleared unless the Paper Empty Ignore has been set with the ESC 8 command.

Upon detection of the end of a continuous form, the printer immediately stops printing. For cut forms, however, the printer continues to print on the following lines for approx. 1/2" — e.g. three lines at 1/6" line feed pitch — before stopping.

Setting DIP SW2-2 to ON disables this function.



Chapter 4.
CONTROL COMMANDS

To print data on your printer, the software in your computer supporting the Epson FX, IBM PC or its compatible printer must send it to the printer. The popular programming language, BASIC, uses the instruction LPRINT followed a list of the data to be sent. This printer also provides special print modes such as Enlarged or Underlined characters. To take advantage of these enhanced features, you must send one of the special codes listed in the CHARACTER SET TABLES in Chapter 5.

For example, the ASCII control code SO (Shift Out – 14 in decimal or 0E in hexadecimal) switches the printer to Enlarged characters. To send this command to the printer in BASIC, type

LPRINT CHR$(14) or LPRINT CHR$(&H0E)

As already mentioned in Chapter 2, this printer provides two separate modes of operation, each of which assigns slightly different interpretations to the codes used for printer control. Some (BS, DC1, DC3, ESC EM, ESC ! , ESC #, ESC %, ESC &, ESC *, ESC /, ESC 4, ESC 5, ESC :, ESC =, ESC >, ESC ? , ESC @, ESC B, ESC I, ESC M, ESC P, ESC Q, ESC R, ESC ^ , ESC b, ESC j, ESC ℓ, ESC p, ESC s, and DEL) apply only to Mode I. To avoid confusion, separate command summary tables are provided on the next and the subsequent pages. Each command description is also labelled ■ Mode I or ■ Mode II at the top of the page.

[NOTE] ESC (Escape Sequence)

ESC is to expand the defined characters, alphanumeric, or symbolic characters, to control codes. ESC never expands any control character itself. If any undefined character code is set following ESC, both ESC and the character code are invalid.
In the following tables, "n" (or "n*i*") or "m" following ESC represents variable value to be specified by the user. It designates specifications concerning data or switching of the mode. For example, in Bit Image mode, "n" specifies the data length. In Underlined mode, "n" switches the mode to set or cancel.

4.1 Command Summary

EPSON FX-105

■ Mode I (DIP SW2-5, OFF)

Format	Command	Code		Ref. Page
		Hex.	Dec.	
BS	Backspace	08	8	43

No Exit Used in IBM Mode

4.2 Basic Printer Control

LF — Line Feed

Format LF

BASIC CHR$(10)

Hex 0A

Function

■ Mode I

Advances paper by one line after printing all the data stored in the print buffer.

* Line feed spacing is automatically set at 1/6" (DIP SW3-6, OFF) or 1/8" (ON), at power on.
* The line feed pitch is modified by ESC 0, ESC 1, ESC 2, ESC 3, or ESC A.
* If an LF code only, or space data followed by LF code is received, a line feed only occurs.
* If data, CR and LF codes are received, the printer performs a line feed after the end of printing.
* If this line feed operation encroaches on the lines to be skipped, set by ESC N, paper will advance to the first print position of the next page.
* This code clears the Enlarged character mode set by SO code.

■ Mode II

Advances paper by one line after printing all the data stored in the print buffer.

* Line feed spacing is automatically set at 1/6" (DIP SW3-6, OFF) or 1/8" (ON), at power on.
* The line feed pitch is modified by ESC 0, ESC 1, ESC 2, ESC 3, or ESC A.
* If an LF code only, or space data followed by LF code is received, a line feed only occurs.
* If data, CR and LF codes are received, the printer performs a line feed after the end of printing.
* If this line feed operation encroaches on the lines to be skipped, set by ESC N, paper will advance to the first print position of the next page.
* This code clears the Enlarged character mode set by SO code.
* If the line to be printed contains any special graphic characters of code $(176)_{10}$ — $(223)_{10}$ or $(244)_{10}$ and the line feed spacing is set at less than 1/6", the specified line feed pitch is automatically changed to 1/6" for only that line.

NOTE: See "4.4 Line Control" on page 87.

Example

```
1  LPRINT "*** LF ***";CHR$(10);
10 LPRINT "IMPACT DOT MATRIX ";"PERSONAL ";
   "PRINTER"
20 LPRINT "* SET LINE FEED *";CHR$(10);
30 LPRINT "IMPACT";CHR$(10);
40 LPRINT "DOT MATRIX";CHR$(10);
50 LPRINT "PERSONAL";CHR$(10);
60 LPRINT "PRINTER";CHR$(10);
70 END
```

```
*** LF ***
IMPACT DOT MATRIX PERSONAL PRINTER
* SET LINE FEED *
IMPACT
DOT MATRIX
PERSONAL
PRINTER
```

FF

Form Feed

Format FF

BASIC CHR$(12)

Hex 0C

Function

■ Mode I

Moves the print position to the top of the next page after printing all the data stored in the print buffer.

* The default value for form feed is 11 inches (12 inches if DIP SW3-5 is ON). e.g. 66 lines when 1/6" line feed pitch is selected.
* The default value is set up when the printer is powered on, reset, or given ESC @ sequence.
* The form length can be modified by an ESC C sequence.
* This code clears the Enlarged character mode set by SO code.

■ Mode II

Moves the print position to the top of the next page after printing all the data stored in the print buffer.

* The default value for form feed is 11 inches (12 inches if DIP SW3-5 is ON). e.g. 66 lines when 1/6" line feed pitch is selected.
* The default value is set up when the printer is powered on or reset.
* The form length can be modified by an ESC C sequence.
* This code clears the Enlarged character mode set by SO code.

NOTE: See "4.5 Page Control" on page 97.

Example

```
1  LPRINT "*** FF ***";CHR$(10);
10 LPRINT CHR$(27);"C";CHR$(5);
20 '* SET ENLARGED MODE *
30 LPRINT CHR$(14);"1ST LINE OF PAGE1";
40 '* SET FORM FEED *
50 LPRINT CHR$(12);"1ST LINE OF PAGE2";
60 LPRINT
70 LPRINT "---ENLARGED MODE IS CLEARED BY FF";
80 END
```

```
*** FF ***
1ST LINE OF PAGE1

1ST LINE OF PAGE2
---ENLARGED MODE IS CLEARED BY FF
```

CR

Carriage Return

Format CR

BASIC CHR$(13)

Hex 0D

Function

■ Mode I

Performs printing of all the data stored in the print buffer.

* A line feed occurs after the printing if $\overline{\text{AUTO FEED XT}}$ signal is Low or the DIP SW3-8 is set to ON.
* The line feed pitch is set by ESC 0, ESC 1, ESC 2, ESC 3, or ESC A.
* CR with line feed clears the Enlarged character mode set by SO code.
* If a CR code only, or space data followed by CR code is received when $\overline{\text{AUTO FEED XT}}$ signal is Low or the DIP SW3-8 is set to ON, a line feed only occurs without movement of the print head.

■ Mode II

Performs printing of all the data stored in the print buffer.

* A line feed occurs after the printing if $\overline{\text{AUTO FEED XT}}$ signal is Low or the DIP SW3-8 is set to ON.
* The line feed pitch is set by ESC 0, ESC 1, ESC 2, ESC 3, or ESC A.
* This command clears the Enlarged character mode set by SO code.
* If a CR code only, or space data followed by CR code is received when $\overline{\text{AUTO FEED XT}}$ signal is Low or the DIP SW3-8 is set to ON, a line feed only occurs without movement of the print head.

Example

```
1  LPRINT "*** CR ***";CHR$(13);CHR$(10);
10 LPRINT "CARRIAGE ";"RETURN"
20 LPRINT
30 LPRINT "* SET CARRIAGE RETURN *";CHR$(13);
   CHR$(10);
40 LPRINT
50 LPRINT "CARRIAGE";CHR$(13);CHR$(10);
60 LPRINT "RETURN";CHR$(13);CHR$(10);
70 END
```

```
*** CR ***
CARRIAGE RETURN

* SET CARRIAGE RETURN *

CARRIAGE
RETURN
```

BS

Backspace

Format BS

BASIC CHR$(8)

Hex 08

Function Moves the print position horizontally one position to the left, in the current character size, after printing all the data stored in the print buffer.

* In Enlarged character mode, the print position backspaces in double Pica pitch.
* This command never moves the print position to the left more than the home position. If the printer receives this command at home position, the command is ignored and does not move the print position to the left.

Example

```
1   LPRINT "*** BS ***";CHR$(10);
10  LPRINT ">>>>><<<<<";CHR$(10);
20  LPRINT CHR$(14);">>>>><<<<<";CHR$(10);
30  LPRINT "* SET BS CODE *";CHR$(10);
40  GOSUB 80
50  LPRINT CHR$(14);
60  GOSUB 80
70  END
80  LPRINT ">>>>>";CHR$(8);CHR$(8);"<<<<<";
    CHR$(10);
90  RETURN
```

```
*** BS ***
>>>><<<<
> > > > ><  <  <  <  <
* SET BS CODE *
>>>**<<<
> > > **<  <  <
```

CAN

Cancel

Format CAN

BASIC CHR$(24);

Hex 18

Function ■ Mode I ■ Mode II

Clears the data in the print buffer.

Example

```
1  LPRINT "*** CAN ***";CHR$(10);
10 LPRINT "0123456789";CHR$(10);
20 '* CANCEL *
30 LPRINT "0123";CHR$(24);
40 LPRINT "456789":END
```

```
*** CAN ***
0123456789
456789
```

■ Mode I

DEL

Delete

Format DEL

BASIC CHR$(127);

Hex 7F

Function Deletes the last one character stored in the print buffer.

*This command is ignored in Proportional or Bit image print mode.
*This command does not change the current print mode.

Example

```
1  LPRINT "*** DEL ***";CHR$(10);
10 LPRINT "Manual for operate";
20 '* DELETE LAST CHARACTER e *
30 LPRINT CHR$(127);"ing";
40 END
```

```
*** DEL ***
Manual for operating
```

■ Mode I

DC 1 (Device Control 1)

Cancel DC3 State

Format DC1

BASIC CHR$(17);

Hex 11

Function Cancels the printer's offline state set by DC3 code.
This command is valid if DIP SW3-7 is set to OFF and the $\overline{\text{SLCT IN}}$ signal is High.
NOTE: See "2.4 Setting DIP Switches" on page 23.

■ Mode I

DC 3 (Device Control 3)

Set Offline State

Format DC3

BASIC CHR$(19);

Hex 13

Function Takes the printer offline where received data is ignored.
This command is valid if DIP SW3-7 is set to OFF and the $\overline{\text{SLCT IN}}$ signal is High.
NOTE: See "2.4 Setting DIP Switches" on page 23.

ESC @

■ Mode I

Printer Initialization

Format ESC @

BASIC CHR$(27);"@";

Hex 1B 40

Function Initializes the printer.

* When receiving this command, the printer returns to the same status as at power on.
* This command clears the data in the print buffer.

Example

```
1  LPRINT "*** ESC @ ***";CHR$(10);
10 '* SET ITALIC MODE *
20 LPRINT CHR$(27);"4";
30 LPRINT "Please clear the data."
40 '* INITIALIZE THE PRINTER *
50 LPRINT CHR$(27);"@";
60 LPRINT "O.K! Now in Normal Mode.";
70 END
```

```
*** ESC @ ***
Please clear the data.
O.K! Now in Normal Mode.
```

ESC <

Home Positioning

Format ESC <

BASIC CHR$(27);"<";

Hex 1B 3C

Function ■ Mode I ■ Mode II

Returns the print head to its home position, after printing all the data stored in the print buffer.

* Subsequent data will be printed, from left to right, starting at the print position immediately following the data previously printed.
* See ESC U sequence.

ESC >

■ Mode I

Set MSB to 1

Format ESC >

BASIC CHR$(27);">";

Hex 1B 3E

Function After this command is received, the most significant bit (MSB) of the following input data is forced to be set to 1.

* This MSB control is not effective to the Bit image data.

Example

```
1   LPRINT "*** ESC > & = ***";CHR$(10);
10  '* SET MSB TO 1 *
20  LPRINT CHR$(27);">";
30  GOSUB 80
40  '* SET MSB TO 0 *
50  LPRINT CHR$(27);"=";
60  GOSUB 80
70  END
80  LPRINT  "Dot Matrix Printer"
90  LPRINT
100 RETURN
```

```
*** ESC > & = ***
Dot Matrix Printer

Dot Matrix Printer
```

ESC =

■ Mode I

Set MSB to 0

Format ESC =

BASIC CHR$(27);"=";

Hex 1B 3D

Function After this command is received, the most significant bit (MSB) of the following input data is forced to be set to 0.

Example See ESC >.

ESC

Cancel MSB Control Mode

Format ESC #

BASIC CHR$(27);"#";

Hex 1B 23

Function Clears the MSB control mode set by ESC > or ESC = .

Example

```
1  LPRINT "*** ESC # ***";CHR$(10);
10 LPRINT CHR$(27);">";
20 LPRINT "SET MSB CONTROL"
30 LPRINT
40 LPRINT CHR$(27);"#";
50 LPRINT "CANCEL MSB CONTROL";
60 END
```

```
*** ESC # ***
SET MSB CONTROL

CANCEL MSB CONTROL
```

ESC I

Switch to Control Codes/Printable Characters

Format ESC I n

n = 0 : Control codes
n = 1 : Printable characters

BASIC CHR$(27);"I";CHR$(n);

Hex 1B 49 n

Function Switches the control code area to printable characters or control codes.

*Receiving this command with n = 1, the printer interprets codes assigned for $(0)_{10}$ – $(31)_{10}$, and $(128)_{10}$ – $(159)_{10}$ as printable characters; with n = 0, as control codes, if defined.

Dec. code	Char.	Dec. code	Char.	Dec. code	Char.	Dec. code	Char.	Dec. code	Char.	Dec. code	Char.
0	à	13	CR	26	ä	128	À	141	CR	154	Ä
1	è	14	SO	27	ESC	129	È	142	SO	155	ESC
2	ù	15	SI	28	ü	130	Ù	143	SI	156	Ü
3	ò	16	§	29	É	131	Ò	144	§	157	É
4	ì	17	ß	30	é	132	Ì	145	ß	158	é
5	°	18	DC2	31	ö	133	°	146	DC2	159	Ö
6	£	19	DC3			134	£	147	DC3		
7	¡	20	DC4			135	¡	148	DC4		
8	BS	21	ø			136	BS	149	ø		
9	HT	22	-			137	HT	150	-		
10	LF	23	Ä			138	LF	151	Ä		
11	VT	24	CAN			139	VT	152	CAN		
12	FF	25	Ü			140	FF	153	Ü		

Example

```
1   LPRINT "*** ESC I n ***";CHR$(10);
10  '* SWITCH TO PRINTABLE CHARACTERS *
20  LPRINT CHR$(27);"I";CHR$(1);
30  FOR M=1 TO 2
40  FOR N=1 TO 19
50  READ A:LPRINT CHR$(A);
60  NEXT:LPRINT
70  NEXT
80  '* SWITCH TO CONTROL CODES *
90  LPRINT CHR$(27);"I";CHR$(0);:END
100 DATA 0,1,2,3,4,5,6,7,16,17,21
110 DATA 22,23,25,26,28,29,30,31
120 DATA 128,129,130,131,132,133
130 DATA 134,135,144,145,149,150
140 DATA 151,153,154,156,157,158,159
```

```
*** ESC I n ***
àèùòì°£¡§ßø¨ÄÜäüëé¥
àèùòì°£¡§ßø¨ÄÜäüëé¥
```

ESC U

Select Unidirectional/Bidirectional Print

Format ESC U n

n = 0 : Bidirectional print
n = 1 : Unidirectional print

BASIC CHR$(27);"U";CHR$(n);

Hex 1B 55 n

Function ■ Mode I ■ Mode II

Selects Unidirectional or Bidirectional print mode.

* At power on, the printer is automatically set in the bidirectional print mode.
* The unidirectional print mode set by ESC U with n = 1 keeps errors in horizontal print positions from accumulating.

Example

```
1   LPRINT "*** ESC U n ***";CHR$(10);
10  '* SELECT UNIDIRECTIONAL PRINT *
20  LPRINT CHR$(27);"U";CHR$(1);
30  LPRINT "Uni-direction"
40  FOR I=1 TO 2
50  LPRINT "->->->->->->->->->->->->";
60  LPRINT CHR$(10);
70  NEXT
80  '* SELECT BIDIRECTIONAL PRINT *
90  LPRINT CHR$(27);"U";CHR$(0);
100 LPRINT "Bi-direction"
110 LPRINT "->->->->->->->->->->->->";CHR$(10);
120 LPRINT "<-<-<-<-<-<-<-<-<-<-<-<-";
130 END
```

```
*** ESC U n ***
Uni-direction
->->->->->->->->->->->->
->->->->->->->->->->->->
Bi-direction
->->->->->->->->->->->->
<-<-<-<-<-<-<-<-<-<-<-<-
```

■ Mode I

ESC s

Set/Cancel Half-Speed Print

Format ESC s n

n = 0 : Cancel
n = 1 : Set

BASIC CHR$(27);"s";CHR$(n);

Hex 1B 73 n

Function Sets or clears half-speed print operation.

* After receiving this command with n = 1 in Pica Draft print mode, the print speed is reduced to half resulting in quieter print operation.

■ Mode I

ESC EM

Control Cut Sheet Feeder

Format ESC EM n

BASIC CHR$(27);CHR$(25);CHR$(n);

Hex 1B 19 n

Function Controls an optional Cut Sheet Feeder.

n	Function
"0" = CHR$(48)	Deselect Cut Sheet Feeder.
"4" = CHR$(52)	Select Cut Sheet Feeder.
"R" = CHR$(82)	Eject forms.

* This command makes the Cut Sheet Feeder operable. The cut sheet feeder mode can be changed with switch panel operation when the printer is offline.
* Unless an optional Cut Sheet Feeder is installed, this command operation is not assured.

ESC 8

Ignore Paper Empty

Format ESC 8

BASIC CHR$(27);"8";

Hex 1B 38

Function ■ Mode I ■ Mode II

Causes the printer to ignore the Paper Empty (PE) state.

* This command allows the printer to keep online and print to the end of the paper. It is functionally equivalent to the DIP SW2-2 setting ON. However this command does not disable the PE detection function completely; that is, the CHECK lamp comes on and the PE signal is output.

ESC 9

Cancel Paper Empty Ignore

Format ESC 9

BASIC CHR$(27);"9";

Hex 1B 39

Function ■ Mode I ■ Mode II

Clears the Paper Empty Ignore condition set by ESC 8 sequence.

* This command activates the PE detection function.
* If DIP SW2-2 is set to OFF, this function is always active when the power is first applied.
* If this command is received in the Paper Empty Ignore state, the printer outputs $\overline{\text{FAULT}}$ and BUSY signals.

4.3 Character Control

4.3.1 Typeface

■ Mode I

ESC M

Elite-Sized Character Mode

Format ESC M

BASIC CHR$(27);"M";

Hex 1B 4D

Function Prints the data in Elite-sized character mode (12 characters/inch).

*This code will be ignored if the printer has already been set in Elite-sized character mode.

Example

```
1  LPRINT "*** ESC M ***";CHR$(10);
10 LPRINT "* PICA-SIZED * 1234567890";CHR$(10);
20 LPRINT CHR$(27);"M";
30 LPRINT "* ELITE-SIZED *   1234567890";
40 LPRINT CHR$(27);"P";:END
```

```
*** ESC M ***
* PICA-SIZED * 1234567890
* ELITE-SIZED *   1234567890
```

10 CPI

12 CPI

ESC P

Cancel Elite-Sized Character Mode

Format ESC P

BASIC CHR(27);"P";

Hex 1B 50

Function Clears the Elite-sized character mode set by ESC M sequence.

* The printer returns to the Pica-sized character mode.
* This command clears only ESC M sequence and does not clear other modes such as Enlarged or Condensed character mode.

Example

```
1   LPRINT "*** ESC P ***";CHR$(10);
10  LPRINT CHR$(27);"M";
20  LPRINT "ELITE-SIZED  ";:GOSUB 140
30  '* CANCEL ELITE MODE *
40  LPRINT CHR$(27);"P";
50  LPRINT "PICA-SIZED ";:GOSUB 140
60  LPRINT CHR$(15);
70  LPRINT "CONDENSED-SIZED    ";:GOSUB 140
80  LPRINT CHR$(27);"M";
90  LPRINT "CONDENSED ELITE-SIZED ";:GOSUB 140
100 '* CANCEL ELITE MODE *
110 LPRINT CHR$(27);"P";
120 LPRINT "CONDENSED-SIZED    ";:GOSUB 140
130 LPRINT CHR$(18);:END
140 LPRINT "1234567890 ABCDEFGHIJ";CHR$(10);
150 RETURN
```

```
*** ESC P ***
ELITE-SIZED  1234567890 ABCDEFGHIJ
PICA-SIZED 1234567890 ABCDEFGHIJ
CONDENSED-SIZED    1234567890 ABCDEFGHIJ
CONDENSED ELITE-SIZED 1234567890 ABCDEFGHIJ
CONDENSED-SIZED    1234567890 ABCDEFGHIJ
```

ESC p

Set/Cancel Proportional Spacing

Format ESC p n

n = 0 : Cancel
n = 1 : Set

BASIC CHR$(27);"p";CHR$(n);

Hex 1B 70 n

Function Sets or cancels Proportional print mode.

* After receiving ESC p with n = 1, the printer prints the subsequent data in Proportional spacing mode. In the proportional mode, BS and DEL codes are invalid.
* In the proportional mode, the data is always printed in Emphasized characters.

Example

```
1   LPRINT "*** ESC p n ***";CHR$(10);
10  LPRINT "* NORMAL PRINT MODE *"
20  GOSUB 90
30  LPRINT
40  LPRINT CHR$(27);"p";CHR$(1);
50  LPRINT "* PROPORTIONAL SPACING MODE *"
60  GOSUB 90
70  LPRINT CHR$(27);"p";CHR$(0);
80  END
90  LPRINT "  This excellent impact dot matrix"
100 LPRINT "  printer combines high quality"
110 LPRINT "  and performance features!!"
120 RETURN
```

```
*** ESC p n ***
* NORMAL PRINT MODE *
  This excellent impact dot matrix
  printer combines high quality
  and performance features!!

* PROPORTIONAL SPACING MODE *
  This excellent impact dot matrix
  printer combines high quality
  and performance features!!
```

Example

```
1   LPRINT "*** ESC x n ***";CHR$(10);
10  LPRINT CHR$(27);"x";CHR$(1);
20  LPRINT "* NLQ MODE *";CHR$(10);
30  GOSUB 100
40  LPRINT
50  LPRINT CHR$(27);"x";CHR$(0);
60  LPRINT "* DRAFT MODE *";CHR$(10);
70  GOSUB 100
80  LPRINT CHR$(27);CHR$(3);
90  END
100 FOR X=33 TO 126
110 IF Y>31 THEN LPRINT CHR$(10);:Y=0
120 LET Y=Y+1:LPRINT CHR$(X);
130 NEXT
140 LPRINT CHR$(10);:Y=0
150 RETURN
```

```
*** ESC x n ***
* NLQ MODE *
!"#$%&'()*+,-./0123456789:;<=>?@
ABCDEFGHIJKLMNOPQRSTUVWXYZ¡Ñ¿^_`
abcdefghijklmnopqrstuvwxyz¨ñ}~

* DRAFT MODE *
!"#$%&'()*+,-./0123456789:;<=>?@
ABCDEFGHIJKLMNOPQRSTUVWXYZ¡Ñ¿^_`
abcdefghijklmnopqrstuvwxyz¨ñ}~
```

ESC k

Select NLQ Font

Format ESC k n (0 ≦ n ≦ 3)

BASIC CHR$(27);"k";CHR$(n);

Hex 1B 6B n

Function ■ Mode I ■ Mode II

Prints data with NLQ font selected by "n", after printing all the data stored in the print buffer.

n	Font
0	Prestige (built in the internal CG)
1	Anelia Proportional
2	Quadro
3	Gothic

(built in optional external NLQ fonts P.C.B.s)

* This command is invalid unless an optional NLQ fonts P.C.B. is installed.

Example

```
1   LPRINT "*** ESC k n ***";CHR$(10);
10  '* SET NLQ MODE *
20  LPRINT CHR$(27);"x";CHR$(1);
30  '* SELECT NLQ FONT *
40  LPRINT CHR$(27);"k";CHR$(0);
50  LPRINT "NLQ CHARACTER SET 0 <PRESTIGE>"
60  LPRINT CHR$(27);"k";CHR$(1);
70  LPRINT "NLQ CHARACTER SET 1 <ANELIA P.S.>"
80  LPRINT CHR$(27);"k";CHR$(2);
90  LPRINT "NLQ CHARACTER SET 2 <QUADRO>"
100 LPRINT CHR$(27);"k";CHR$(3);
110 LPRINT "NLQ CHARACTER SET 3 <GOTHIC>";
120 END
```

```
*** ESC k n ***
NLQ CHARACTER SET 0 <PRESTIGE>
NLQ CHARACTER SET 1 <ANELIA P.S.>
NLQ CHARACTER SET 2 <QUADRO>
NLQ CHARACTER SET 3 <GOTHIC>
```

SO (Shift Out)

Enlarged Character Mode

Format SO

BASIC CHR$(14);

Hex 0E

Function

■ Mode I

Sets Enlarged character print mode.

* After receiving this command, the printer prints the data in horizontally enlarged characters until
  - DC 4, ESC W (n = 0) or ESC @ command is received.
  - CR with line feed is received,
  - line feed is performed by LF, VT or FF code (except ESC J), or
  - auto line feed is performed by buffer full.
* This command is cleared by carriage return while ESC W is not.

■ Mode II

Sets Enlarged character print mode.

* After receiving this command, the printer prints the data in horizontally enlarged characters until
  - CR, DC 4, or ESC W (n = 0) command is received,
  - line feed is performed by LF, VT or FF code (except ESC J), or
  - auto line feed is performed by buffer full.
* This command is cleared by carriage return while ESC W is not.

Example

```
1  LPRINT "*** SO ***";CHR$(10);
10 LPRINT "DOT ";
20 '* SET ENLARGED MODE *
30 LPRINT CHR$(14);"MATRIX ";
40 '* CANCEL ENLARGED MODE *
50 LPRINT CHR$(20);"PRINTER";
60 LPRINT CHR$(10);
70 END
```

```
*** SO ***
DOT MATRIX  PRINTER
```

DC 4 (Device Control 4)

Cancel Enlarged Character Mode

Format DC4

BASIC CHR$(20);

Hex 14

Function ■ Mode I ■ Mode II

Clears the Enlarged character mode set by SO code.

*This code does not clear the Enlarged character mode set by ESC W sequence.

Example

```
1  LPRINT "*** DC4 ***";CHR$(10);
10 LPRINT "IMPACT ";
20 '* SET ENLARGED MODE *
30 LPRINT CHR$(14);"DOT MATRIX ";
40 '* CANCEL ENLARGED MODE *
50 LPRINT CHR$(20);"PRINTER";CHR$(10);
60 END
```

```
*** DC4 ***
IMPACT DOT MATRIX PRINTER
```

ESC W

Set/Cancel Enlarged Character Mode

Format ESC W n

n = 0 : Cancel
n = 1 : Set

BASIC CHR$(27);"W";CHR$(n);

Hex 1B 57 n

Function ■ Mode I ■ Mode II

Sets or clears Enlarged character print mode.

* After receiving this code with n = 1, the printer prints the data in Enlarged character mode until ESC W with n = 0 is received. This mode is not cleared by a carriage return while the Enlarged character mode set by SO code is cleared.
* This code with n = 0 clears the Enlarged character mode set by SO.

Example

```
1  LPRINT "*** ESC W n ***";CHR$(10);
10 LPRINT "DOUBLE WIDTH ";
20 '* SET ENLARGED MODE *
30 LPRINT CHR$(27);"W";CHR$(1);"ENLARGED ";
40 '* CANCEL ENLARGED MODE *
50 LPRINT CHR$(27);"W";CHR$(0);"PRINTING";
60 END
```

```
*** ESC W n ***
DOUBLE WIDTH ENLARGED  PRINTING
```

SI (Shift In)

Condensed Character Mode

Format SI

BASIC CHR$(15);

Hex 0F

Function

■ Mode I

Sets Condensed character print mode.

- *After receiving this command, the printer prints the data in condensed mode until DC2 code is received.
- *If the printer receives this command in Pica-sized or Elite-sized character mode, the character pitch becomes 17 or 20 characters/inch, respectively.
- *If this code is used together with SO or ESC W command in Pica-sized or Elite-sized character mode, the printer prints the data in Condensed Enlarged character mode.
- *If this code is used together with ESC E command in Pica-sized character mode, the printer prints the data in Emphasized Condensed character mode; if used in Elite-sized character mode, the ESC E command is ignored.

■ Mode II

Sets Condensed character print mode.

- *After receiving this command, the printer prints the data in condensed mode until DC2 code is received.
- *If the printer receives this command, the character pitch becomes 17 characters/inch.
- *If this code is used together with SO or ESC W command, the printer prints the data in Condensed Enlarged character mode.
- *If this code is used together with ESC E command, the printer prints the data in Emphasized Condensed character mode.

Example

```
1  LPRINT "*** SI ***";CHR$(10);
10 LPRINT "Print ";
20 '* SET CONDENSED MODE *
30 LPRINT CHR$(15);"in Condensed character ";
40 LPRINT "mode after receiving SI code.";
50 LPRINT CHR$(18);:END
```

```
*** SI ***
Print in Condensed character mode after receiving SI code.
```

DC 2 (Device Control 2)

Cancel Condensed Character Mode

Format DC2

BASIC CHR$(18);

Hex 12

Function ■ Mode I ■ Mode II

Clears the Condensed character mode set by SI code after printing all the data stored in the print buffer.

Example

```
1  LPRINT "*** DC2 ***";CHR$(10);
10 '* SET CONDENSED MODE *
20 LPRINT CHR$(15);
30 LPRINT "How can you cancel Condensed ";
40 LPRINT "mode?";CHR$(10);
50 '* CANCEL CONDENSED MODE *
60 LPRINT CHR$(18);
70 LPRINT "By setting DC2 code.";
80 END
```

```
*** DC2 ***
How can you cancel Condensed mode?
By setting DC2 code.
```

ESC E

Emphasized Character Mode

Format ESC E

BASIC CHR$(27);"E";

Hex 1B 45

Function

■ Mode I

Sets Emphasized character mode after printing all the data stored in the print buffer.

*If this code is used together with SI code in Elite-sized character mode, this command is ignored and the current print mode is not changed.
*This mode is cleared by ESC F sequence.

■ Mode II

Sets Emphasized character mode after printing all the data stored in the print buffer.

*This mode is cleared by ESC F sequence.

Example

```
1   LPRINT "*** ESC E & F ***";CHR$(10);
10  '* SET EMPHASIZED MODE *
20  LPRINT CHR$(27);"E";
30  FOR I=1 TO 3
40  FOR J=1 TO 12
50  LPRINT "<*>";:NEXT J
60  LPRINT CHR$(10);
70  NEXT I
80  '* CANCEL EMPHASIZED MODE *
90  LPRINT CHR$(27);"F";
100 FOR I=1 TO 3
110 FOR J=1 TO 12
120 LPRINT "<*>";:NEXT J
130 LPRINT CHR$(10);
140 NEXT I
150 END
```

```
*** ESC E & F ***

<*><*><*><*><*><*><*><*><*><*><*><*>
<*><*><*><*><*><*><*><*><*><*><*><*>
<*><*><*><*><*><*><*><*><*><*><*><*>
```

ESC F

Cancel Emphasized Character Mode

Format ESC F

BASIC CHR$(27);"F";

Hex 1B 46

Function ■ Mode I ■ Mode II

Clears the Emphasized character mode set by ESC E sequence after printing all the data stored in the print buffer.

Example See ESC E.

ESC G

Double-Strike Character Mode

Format ESC G

BASIC CHR$(27);"G";

Hex 1B 47

Function ■ Mode I ■ Mode II

Prints the data in Double-strike character mode.

*Double-strike is a print method in which the same character is printed twice 1/216" vertically staggered.

*In the case of mixed use with Superscript/Subscript mode, this command is ignored, since Superscript/Subscript mode has priority.

Example

```
1  LPRINT "*** ESC G & H ***";CHR$(10);
10 FOR I=1 TO 2
20 '* SET DOUBLE-STRIKE MODE *
30 LPRINT CHR$(27);"G";
40 LPRINT "DOT MATRIX PRINTER";CHR$(10);
50 '* CANCEL DOUBLE-STRIKE MODE *
60 LPRINT CHR$(27);"H";
70 LPRINT "DOT MATRIX PRINTER";CHR$(10);
80 NEXT
90 END
```

```
*** ESC G & H ***
DOT MATRIX PRINTER
DOT MATRIX PRINTER
DOT MATRIX PRINTER
DOT MATRIX PRINTER
```

ESC H

Cancel Double-Strike Character Mode

Format ESC H

BASIC CHR$(27);"H";

Hex 1B 48

Function ■ Mode I ■ Mode II

Clears the Double-strike character mode set by ESC G sequence after printing all the data stored in the print buffer.

Example See ESC G.

■ Mode I

ESC 4

Italic Print Mode

Format ESC 4

BASIC CHR$(27);"4";

Hex 1B 34

Function Prints the data in italics.

* This is invalid in Bit image mode.

Example

```
1  LPRINT "*** ESC 4 & 5 ***";CHR$(10);
10 LPRINT "Do you like Italic mode?";CHR$(10);
20 '* SET ITALIC MODE *
30 LPRINT CHR$(27);"4";CHR$(10);
40 LPRINT "Yes, I like it very much.";CHR$(10);
50 '* CANCEL ITALIC MODE *
60 LPRINT CHR$(27);"5";
70 LPRINT "No. I like Normal mode.";CHR$(10);
80 END
```

```
*** ESC 4 & 5 ***
Do you like Italic mode?

Yes, I like it very much.
No. I like Normal mode.
```

■ Mode I

ESC 5

Cancel Italic Print Mode

Format ESC 5

BASIC CHR$(27);"5";

Hex 1B 35

Function Clears the Italic print mode set by ESC 4 sequence.

Example See ESC 4.

ESC–

Set/Cancal Underlined Mode

Format ESC – n

n = 0 : Cancel
n = 1 : Set

BASIC CHR$(27);"–";CHR$(n);

Hex 1B 2D n

Function

■ Mode I

Sets or clears Underlined print mode.

* After receiving this command with n = 1, the printer prints the subsequent data with an underline.
* Mixed use with all other modes except bit image mode is available.

■ Mode II

Sets or clears Underlined print mode.

* After receiving this command with n = 1, the printer prints the subsequent data with an underline after printing all the data stored in the print buffer.
* Special graphic characters of codes $(176)_{10}$ – $(223)_{10}$ and $(244)_{10}$ can not be underlined.
* Mixed use with all other modes except bit image mode is available.

Example

```
1   LPRINT "*** ESC - n ***";CHR$(10);
10  GOSUB 60
20  LPRINT CHR$(27);"E";
30  GOSUB 60
40  LPRINT CHR$(27);"F";
50  END
60  LPRINT "Elementary ";
70  '* SET UNDERLINED MODE *
80  LPRINT CHR$(27);"-";CHR$(1);
90  LPRINT " Junior ";
100 '* CANCEL UNDERLINED MODE *
110 LPRINT CHR$(27);"-";CHR$(0);
120 LPRINT " High School";
130 LPRINT CHR$(10);
140 RETURN
```

```
*** ESC - n ***
Elementary  Junior  High School
Elementary  Junior  High School
```

ESC S

Superscript/Subscript Mode

Format ESC S n

n = 0 : Set Superscript mode
n = 1 : Set Subscript mode

BASIC CHR$(27);"S";CHR$(n);

Hex 1B 53 n

Function ■ Mode I ■ Mode II

Sets Superscript/Subscript print mode.

- Superscript or subscript is a print method in which upper half or lower half of a character is printed, respectively.
- In these script modes, printing of one character is completed by unidirectional dual printing with 1/216" line feed.
- In the case of mixed use with Double-strike character mode, double striking is not performed.

Example

```
1   LPRINT "*** ESC S n ***";CHR$(10);
10  LPRINT CHR$(27);"E";"EMPHASIZED ";
20  '* SET SUBSCRIPT MODE *
30  LPRINT CHR$(27);"S";CHR$(1);"SUBSCRIPT ";
40  LPRINT CHR$(15);"SUBSCRIPT";
50  LPRINT CHR$(27);"T";CHR$(27);"F";CHR$(18);
    CHR$(10);
60  LPRINT "NORMAL ";
70  '* SET SUPERSCRIPT MODE *
80  LPRINT CHR$(27);"S";CHR$(0);"SUPERSCRIPT";
90  LPRINT CHR$(15);" SUPERSCRIPT";
100 LPRINT CHR$(27);"T";CHR$(18);
110 END
```

```
*** ESC S n ***
EMPHASIZED SUBSCRIPT SUBSCRIPT
NORMAL SUPERSCRIPT SUPERSCRIPT
```

ESC T

Cancel Superscript/Subscript Mode

Format ESC T

BASIC CHR$(27);"T";

Hex 1B 54

Function ■ Mode I ■ Mode II

Clears the Superscript/Subscript print mode set by ESC S sequence after printing all the data stored in the print buffer.

Example

```
1   LPRINT "*** ESC S n & T ***";CHR$(10);
10  LPRINT "* SUBSCRIPT *     ";
20  LPRINT "H";
30  '* SET SUBSCRIPT MODE *
40  LPRINT CHR$(27);"S";CHR$(1);CHR$(15);"2";
50  '* CANCEL SUBSCRIPT MODE *
60  LPRINT CHR$(27);"T";CHR$(18);"0";CHR$(10);
70  LPRINT "* SUPERSCRIPT *   ";
80  LPRINT "y";
90  LPRINT CHR$(27);"S";CHR$(0);CHR$(15);"3";
100 LPRINT CHR$(27);"T";CHR$(18);"xy";
110 LPRINT CHR$(27);"S";CHR$(0);CHR$(15);"5";
120 LPRINT CHR$(27);"T";CHR$(18);"=y";
130 LPRINT CHR$(27);"S";CHR$(0);CHR$(15);"8";
140 LPRINT CHR$(27);"T";CHR$(18);:END
```

```
*** ESC S n & T ***
* SUBSCRIPT *      H2O
* SUPERSCRIPT *    y3xy5=y8
```

ESC !

Change Print Mode Parameters

Format ESC ! n (0 ≦ n ≦ 255)

BASIC CHR$(27);"!";CHR$(n);

Hex 1B 21 n

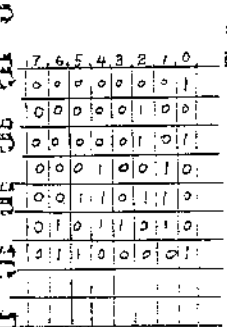
Function Changes print mode parameters with a single command.

* The print mode parameters are determined by the bit values in "n".

Bit No.	Bit Value "1"	Bit Value "0"	Bit order
7	Underlined	—	2^7
6	Italic	—	2^6
5	Enlarged	—	2^5
4	Double-Strike	—	2^4
3	Emphasized	—	2^3
2	Condensed	—	2^2
1	Proportional	—	2^1
0	Elite	Pica	2^0

Example

```
1  LPRINT "*** ESC ! n ***";CHR$(10);
10 LPRINT CHR$(27);"D";CHR$(12);CHR$(0);
20 FOR N=1 TO 10:READ A
30 LPRINT CHR$(27);"!";CHR$(0);
40 LPRINT "Mode ";A;CHR$(9);
50 '* SELECT MULTIPLE PRINT *
60 LPRINT CHR$(27);"!";CHR$(A);
70 LPRINT "Select Print Mode"
80 NEXT
90 DATA 0,1,4,5,18,54,90,97,156,178,
```



```
*** ESC ! n ***
Mode   0    Select Print Mode
Mode   1    Select Print Mode
Mode   4    Select Print Mode
Mode   5    Select Print Mode
Mode  18    Select Print Mode
Mode  54    Select Print Mode
Mode  90    Select Print Mode
Mode  97    Select Print Mode
Mode 156    Select Print Mode
Mode 178    Select Print Mode
```

■ Pica Mode

	Proportional	Condensed	Emphasized	Double-Strike	Enlarged	Italic	Underlined
Proportional		Proportional	Proportional	○	○	○	○
Condensed	Proportional		○	○	○	○	○
Emphasized	Proportional	○		○	○	○	○
Double-Strike	○	○	○		○	○	○
Enlarged	○	○	○	○		○	○
Italic	○	○	○	○	○		○
Underlined	○	○	○	○	○	○	

■ Elite Mode

	Proportional	Condensed	Emphasized	Double-Strike	Enlarged	Italic	Underlined
Proportional		Proportional	Proportional	○	○	○	○
Condensed	Proportional		Condensed	○	○	○	○
Emphasized	Proportional	Condensed		○	○	○	○
Double-Strike	○	○	○		○	○	○
Enlarged	○	○	○	○		○	○
Italic	○	○	○	○	○		○
Underlined	○	○	○	○	○	○	

The above tables list all possible print mode pairs. A circle "○" denotes a valid combination. (e.g.) Double-Strike and Proportional print modes may be used together.

Some entries in the table have a print mode name instead. The corresponding combination is impossible so the printer uses only the one listed.
(e.g.) If Condensed and Proportional print modes are set together, the Proportional mode has priority and the Condensed mode is ignored.

ESC R (EPSON) National Character Set

Format ESC R n (0 ≦ n ≦ 15)

BASIC CHR$(27);"R";CHR$(n);

Hex 1B 52 n

Function Selects each national character set.

* After receiving this command, the printer prints with each national character set selected by "n".

n	National character set
0	U.S.A.
1	France I
2	Germany
3	U.K. I
4	Denmark I
5	Sweden
6	Italy
7	Spain
8	Japan
9	Norway I
10	Denmark II
11	U.K. II
12	Norway II
13	Netherlands
14	France II
15	South Africa

PAGE 125 ÷ 126

* The selected national character set remains valid until re-set by ESC R sequence.

Example

```
1   LPRINT "*** ESC R n ***";CHR$(10);
10  LPRINT "< U.S.A >":GOSUB 70
20  LPRINT "< FRANCE >":GOSUB 70

* CANCEL ESC 6 SETTING *
```

■ Mode I

ESC 7

Cancel Expanded Code Area

Format ESC 7

BASIC CHR$(27);"7";

Hex 1B 37

Function Clears the expanded code area set by ESC 6 sequence.

*This command suppresses printing of the printable characters defined in $(128)_{10}$ – $(159)_{10}$ and $(255)_{10}$, making control codes in these areas valid.

Example See ESC 6 in Mode I.

4.3.3 Download

■ Mode I

ESC &

Define Downloaded Characters

[Draft Mode]

Format 1 ESC & NUL n m a_0 p_{0-1} ... p_{0-11} a_k p_{k-1} ... p_{k-2} ... p_{k-11}
(0 ≦ n, m ≦ 255)

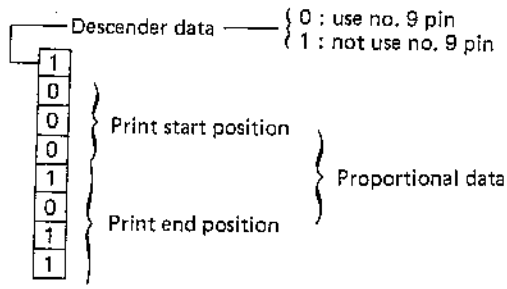
BASIC CHR$(27);"&";CHR$(0);CHR$(n);CHR$(m);
CHR$($a_0$);CHR$(p_{0-1}); ... CHR$($p_{0-11}$); ...
CHR$($a_k$);CHR$(p_{k-1}); ... CHR$($p_{k-11}$);

Hex 1B 26 00 n m a_0 p_{0-1} ... p_{0-11} ... a_k p_{k-1} ... p_{k-11}

Function Defines the user-defined download characters in the pattern of p_{k-1}... p_{k-11} for the character addresses from n to m.

* Character "a" is an attribute character consisting of descender data and proportional data.

Attribute "a"



* To define only one character , m = n.
* If DIP SW2-3 is set to ON (download buffer not selected), this command is ignored.

■ Mode I

Example

```
1   LPRINT "*** ESC & 0 n m ***";CHR$(10);
10  '* DEFINE DOWNLOADED CHARACTER *
20  LPRINT CHR$(27);"&";CHR$(0);"DD";
30  LPRINT CHR$(139);
40  LPRINT CHR$(8);CHR$(16);CHR$(40);CHR$(64);
50  LPRINT CHR$(191);CHR$(64);CHR$(40);CHR$(16);
    CHR$(8);CHR$(0);CHR$(0);
60  LPRINT "--DOWNLOADED CHARACTER--"
70  '* SELECT DOWNLOADED CHARACTER *
80  LPRINT CHR$(27);"%";CHR$(1);CHR$(0)
90  LPRINT "    DDDDDDDDDDDDD"
100 LPRINT CHR$(27);"%";CHR$(0);CHR$(0)
110 END
```

```
*** ESC & 0 n m ***
--DOWNLOADED CHARACTER--

     ♦♦♦♦♦♦♦♦♦♦♦♦♦
```

[NLQ Mode]

Format 2 ESC & n m_1 m_2 a_0 a_1 a_2 p_{1-1} p_{1-2} p_{1-3} ... pa_{1-1} pa_{1-2} pa_{1-3} ... ak_0 ak_1 ak_2 pk_{1-1} pk_{1-2} pk_{1-3} ... pak_{1-1} pak_{1-2} pak_{1-3}

$n = 0$ or 1

$0 \leq m_1, m_2 \leq 127$

BASIC CHR$(27);"&";CHR$(n);CHR$($m_1$);CHR$(m_2);CHR$($a_0$);CHR$(a_1);CHR$($a_2$);CHR$(p_{1-1});CHR$($p_{1-2}$);CHR$(p_{1-3});... CHR$($pa_{1-1}$);CHR$(pa_{1-2});CHR$($pa_{1-3}$);... CHR$(ak_0);CHR$($ak_1$);CHR$(ak_2);CHR$($pk_{1-1}$);CHR$(pk_{1-2});CHR$($pk_{1-3}$);... CHR$(pak_{1-1});CHR$($pak_{1-2}$);CHR$(pak_{1-3})

Hex 1B 26 n m_1 m_2 a_0 a_1 a_2 p_{1-1} p_{1-2} p_{1-3} ... pa_{1-1} pa_{1-2} pa_{1-3} ... ak_0 ak_1 ak_2 pk_{1-1} pk_{1-2} pk_{1-3} ... pak_{1-1} pak_{1-2} pak_{1-3}

Function Defines the user-defined download characters in the pattern of pa_{1-1} ... pa_{1-3} ... for the character addresses from m_1 to m_2.

* a_0 : Pre-character space
a_1 : Character size
a_2 : Post-character space
} These are represented by the number of dots.

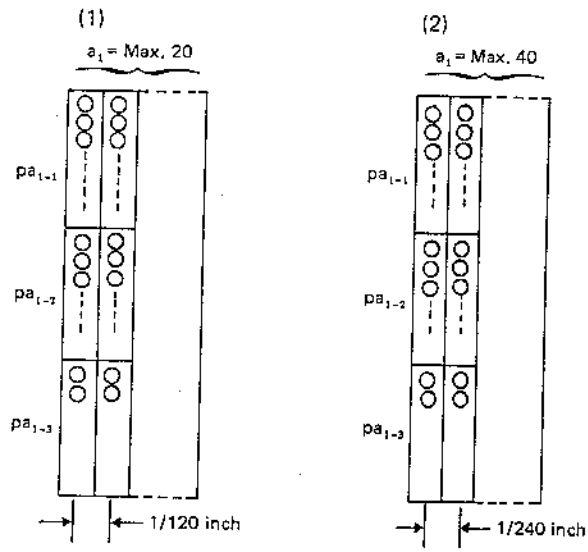
* The dot density is specified by "n".

(1) If n = 0, standard density (1/120")

$0 \leqq a_0 \leqq 20$ $0 \leqq a_1 \leqq 20$ $0 \leqq a_2 \leqq 20$ $0 \leqq a_0 + a_1 + a_2 \leqq 60$

(2) If n = 1, double density (1/240", adjoining dots are not printed.)

$0 \leqq a_0 \leqq 40$ $0 \leqq a_1 \leqq 40$ $0 \leqq a_2 \leqq 40$ $0 \leqq a_0 + a_1 + a_2 \leqq 120$



* Only the two upper bits are effective in pak_{1-3}.
* The maximum character size in above (1) and (2) cases is 18(H) x 20(W) and 18 (H) x 40 (W), respectively.
* This command is invalid if no optional NLQ font, LQ-200, is installed or if DIP SW2-3 is set to ON.

Example

n = 0

--- 7/72 INCH LINE FEED ---
```

ESC A

n/72" Line Spacing

Format ESC A n

BASIC CHR$(27);"A";CHR$(n);

Hex 1B 41 n

Function

■ Mode I

Sets line spacing to n/72". (0 ≦ n ≦ 85)

* When n = 0, LF and VT codes are functionally equivalent to CR codes. The LF switch is ignored.
* When n = 1, the line feed pitch equals the vertical distance between dots in the matrix.
* Since the most significant bit of "n" is ignored, "n" + 128 is recognized as "n". "n" out of this range (86 ≦ n ≦ 127 and 214 ≦ n ≦ 255) makes this command invalid and retains the line spacing previously set.
* When the power is first applied, "n" is automatically set to 12. (for a line spacing of 1/6")

Example

```
1  LPRINT "*** ESC A n ***";CHR$(10);
10 FOR I=10 TO 20 STEP 5
20 '* SET n/72 INCH LINE SPACING *
30 LPRINT CHR$(27);"A";CHR$(I);
40 LPRINT "---";I;"/72 INCH LINE FEED ---";
50 LPRINT CHR$(10);
60 NEXT
70 LPRINT "- END -":END
```

```
*** ESC A n ***
--- 10 /72 INCH LINE FEED ---
--- 15 /72 INCH LINE FEED ---
--- 20 /72 INCH LINE FEED ---

- END -
```

■ Mode II

Sets line spacing to n/72". (1 ≦ n ≦ 85)

* The form advances by the specified line spacing when the printer receives an ESC 2 sequence.
* When n = 1, the line feed pitch equals the vertical distance between dots in the matrix.
* Since the most significant bit is ignored, "n" + 128 is the same as "n". "n" out of this range makes this command invalid and retains the line spacing previously set.
* At power on, "n" is automatically set to 12. (for a line spacing of 1/6")
* For the sample program and printout, see the description for ESC 2 on page 92.

ESC 2

Activate n/72" Line Spacing

Format ESC 2

BASIC CHR$(27);"2";

Hex 1B 32

Function Activates ESC A command received previously.

* If an ESC A has been received, the line feed pitch changes to that specified by the ESC A sequence.
* This command still takes effect even if the line feed spacing has been changed by other commands after receipt of the ESC A.
* This command is ignored if the print line contains any special graphic characters not in the Superscript or Subscript mode and the ESC A sequence specified a line spacing of less than 1/6". Instead, the form advances 1/6".

Example

```
1   LPRINT "*** ESC 2 ***";CHR$(10);
10  LPRINT "* ESC A n *";CHR$(10);
20  FOR N=10 TO 40 STEP 10
30  '* SET n/72 INCH LINE SPACING *
40  LPRINT CHR$(27);"A";CHR$(N);
50  LPRINT "---";N;"/72 INCH LINE FEED ---";
    CHR$(10);
60  NEXT N:LPRINT
70  LPRINT "* ESC A n & 2 *";CHR$(10);
80  FOR Z=10 TO 40 STEP 10
90  '* SET n/72 INCH LINE FEED *
100 LPRINT CHR$(27);"A";CHR$(Z);CHR$(27);"2";
110 LPRINT "---";Z;"/72 INCH LINE FEED ---";
    CHR$(10);
120 NEXT Z
130 LPRINT "- END -":END
```

```
*** ESC 2 ***
* ESC A n *
--- 10 /72 INCH LINE FEED ---
--- 20 /72 INCH LINE FEED ---
--- 30 /72 INCH LINE FEED ---
--- 40 /72 INCH LINE FEED ---

* ESC A n & 2 *
--- 10 /72 INCH LINE FEED ---
--- 20 /72 INCH LINE FEED ---

--- 30 /72 INCH LINE FEED ---

--- 40 /72 INCH LINE FEED ---

- END -
```

ESC 3

n/216" Line Spacing

Format ESC 3 n

BASIC CHR$(27);"3";CHR$(n);

Hex 1B 33 n

Function

■ Mode I (0 ≦ n ≦ 255)

Sets line spacing to n/216".

* After this command is received, the subsequent line spacing is set at n/216 inch, or n/3 vertical dot pitch.
* This command remains valid until a new line spacing command is received.
* If n = 1 or 2, the paper feed accuracy is not assured.
* If n = 0, LF and VT codes are functionally equivalent to CR codes. The LF switch is inoperable.

■ Mode II (1 ≦ n ≦ 255)

Sets line spacing to n/216".

* After this command is received, the subsequent line spacing is set at n/216 inch,
* or n/3 vertical dot pitch.
* This command remains valid until a new line spacing command is received.
* If n = 1 or 2, the paper feed accuracy is not assured.
* This command is ignored if the print line contains any special graphic characters not in the Superscript or Subscript mode and n/216" is less than 1/6". Instead, the form advances 1/6".

Example

```
1  LPRINT "*** ESC 3 n ***";CHR$(10);
10 FOR N=10 TO 130 STEP 40
20 '* SET n/216 INCH LINE SPACING *
30 LPRINT CHR$(27);"3";CHR$(N);
40 LPRINT "---";N;"/216 INCH LINE FEED ---";
50 LPRINT CHR$(10);:NEXT
60 LPRINT "- END -":END
```

```
*** ESC 3 n ***
=== 10 /216 INCH LINE FEED ===
--- 90 /216 INCH LINE FEED ---

--- 130 /216 INCH LINE FEED ---

- END -
```

ESC J

n/216" Line Feed

Format ESC J n (0 ≦ n ≦ 255)

BASIC CHR$(27);"J";CHR$(n);

Hex 1B 4A n

Function

■ Mode I

Feeds the form n/216" after printing all the data stored in the print buffer.

* This sequence does not change line spacing. (See ESC 3.)
* A specification of n = 0 produces only printing. It does not advance the form.
* This code does not clear the Enlarged character mode set by an SO code.
* The carriage does not return after printing. The next character will be printed on the next print position on the new line.

■ Mode II

Feeds the form n/216" after printing all the data stored in the print buffer.

* This sequence does not change line spacing. (See ESC 3.)
* A specification of n = 0 produces only printing. It does not advance the form.
* This code does not clear the Enlarged character mode set by SO code.
* The carriage returns after printing to the print start position at the left end of the new line.

Example

```
1  LPRINT "*** ESC J n ***";CHR$(10);
10 FOR N=50 TO 130 STEP 40
20 LPRINT "---";N;"/216 INCH LINE FEED ---";
   CHR$(13);
30 '* SET n/216 INCH LINE FEED *
40 LPRINT CHR$(27);"J";CHR$(N);
50 NEXT
60 LPRINT "- END -":END
```

```
*** ESC J n ***
--- 50 /216 INCH LINE FEED ---
--- 90 /216 INCH LINE FEED ---

--- 130 /216 INCH LINE FEED ---

- END -
```

ESC j

n/216" Reverse Line Feed

Format ESC j n

BASIC CHR$(27);"j";CHR$(n);

Hex 1B 6A n

Function Executes an n/216" reverse line feed, after printing all the data stored in the print buffer.

* After executing the reverse line feed, the set value is cleared.
* Next print position will be the subsequent position, not returning to the leftmost.

Example

```
1   LPRINT "*** ESC j n ***";CHR$(10);
10  LPRINT CHR$(27);"B";CHR$(8);CHR$(0);
20  LPRINT CHR$(11);
30  LPRINT "DOT";
40  GOSUB 100
50  LPRINT "MATRIX";
60  GOSUB 100
70  LPRINT "PRINTER";
80  END
90  '* SET 100/216 INCH REVERSE LF *
100 LPRINT CHR$(27);"j";CHR$(100);
110 RETURN
```

```
*** ESC j n ***

          PRINTER

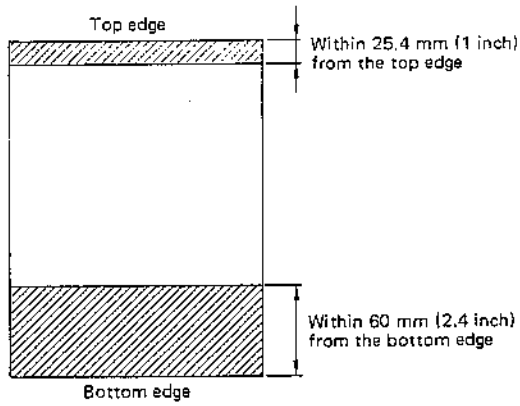
    MATRIX

DOT
```

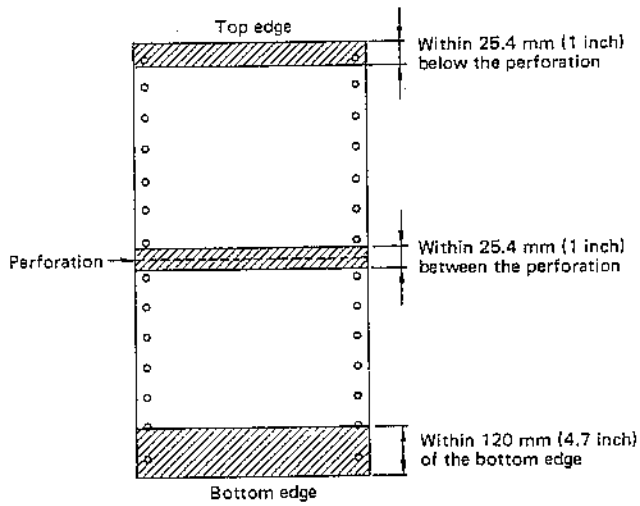
■ Cautions for Reverse Paper Feed

To avoid damage to the printer or a paper jam, do not execute a reverse paper feed in the shaded areas shown below.

(1) Cut Forms



(2) Fanfold Forms The reverse paper feed is possible in unrestricted area. However, reverse paper feed over the restricted area should be avoided.



4.5 Page Control

ESC C

Page Length Setting

Format 1 ESC C n (1 ≦ n ≦ 127)

BASIC CHR$(27);"C";CHR$(n);

Hex 1B 43 n

Function ■ Mode I ■ Mode II

Defines the number of lines per page.

* One page is defined as "n" line length.
* The top of page position is assumed when this command is received.
* Since stored as an absolute value, the specified page length is not changed even if the line feed pitch is modified after this setting.
* This code clears skip perforation mode and vertical TABs previously set.
* Since the most significant bit of "n" is ignored, "n" + 128 is recognized as "n".

Format 2 ESC C NUL n (1 ≦ n ≦ 22)

BASIC CHR$(27);"C";CHR$(0);CHR$(n);

Hex 1B 43 00 n

Function ■ Mode I ■ Mode II

Defines page length in inches.

* The page length is defined as "n" inches.
* The top of page position is assumed when this command is received.
* This code clears skip perforation mode and vertical TABs previously set.
* Since stored as an absolute value, the specified page length is not changed even if the line feed pitch is modified after this setting.

Example

```
1  LPRINT "*** ESC C n ***";CHR$(10);
10 FOR I=1 TO 3
20 READ A
30 '* SET PAGE LENGTH *
40 LPRINT CHR$(27);"C";CHR$(A);
50 LPRINT "TOP OF PAGE"I;CHR$(12);
60 NEXT
70 DATA 2,4,6
80 LPRINT "- END -":END
```

```
*** ESC C n ***
TOP OF PAGE 1

TOP OF PAGE 2

TOP OF PAGE 3

- END -
```

ESC N

Set Skip Perforation

Format ESC N n (1 ≦ n ≦ 127)

BASIC CHR$(27);"N";CHR$(n);

Hex 1B 4E n

Function ■ Mode I ■ Mode II

Sets skip perforation mode.

* The last "n" lines on the page are skipped.
* If n = 0, this command is ignored and previous setting is valid.
* The value of "n" should not exceed the page length set by ESC C sequence.
* Since the skip perforation amount is stored as an absolute value, it is not changed even if the line feed pitch is modified after this setting.
* This mode is cleared when the page length is changed by ESC C sequence.
* One inch skip perforation is automatically set up at power on, if DIP SW2-6 is set to ON. Since the default value of the page length is 11 inches (DIP SW3-5, ON), the printer prints 60 lines and skips 6 lines.
  The 1 inch skip perforation will be cleared by ESC C sequence.

Example

```
1  LPRINT "*** ESC N n ***";CHR$(10);
10 '* SET PAGE LENGTH *
20 LPRINT CHR$(27);"C";CHR$(5);
30 '* SET SKIP PERFORATION *
40 LPRINT CHR$(27);"N";CHR$(1);
50 FOR I=1 TO 5
60 LPRINT "---SKIP PERFORATION---"
70 NEXT
80 END
```

```
*** ESC N n ***
---SKIP PERFORATION---
---SKIP PERFORATION---
---SKIP PERFORATION---
---SKIP PERFORATION---

---SKIP PERFORATION---
```

ESC O

Cancel Skip Perforation

Format ESC O

BASIC CHR$(27);"O";

Hex 1B 4F

Function ■ Mode I ■ Mode II

Clears skip perforation mode set by ESC N sequence

* This command turns the printer into the same status as at power on or at ESC @ input, if DIP SW2-6 is set to OFF.
* This command clears the default of 1 inch skip perforation automatically set with DIP SW2-6 ON.

Example

```
1   LPRINT "*** ESC O ***";CHR$(10);
10 '* SET PAGE LENGTH *
20  LPRINT CHR$(27);"C";CHR$(3);
30 '* SET SKIP PERFORATION *
40  LPRINT CHR$(27);"N";CHR$(1);
50  FOR I=1 TO 3
60  LPRINT "---SKIP PERFORATION---"
70  NEXT I
80 '* CANCEL SKIP PERFORATION *
90  LPRINT "* SET ESC O CODE *";
100 LPRINT CHR$(27);"O";CHR$(10);
110 FOR J=1 TO 3
120 LPRINT "---CLEAR SKIP---"
130 NEXT J
140 END
```

```
*** ESC O ***

---SKIP PERFORATION---

---SKIP PERFORATION---
* SET ESC O CODE *
---CLEAR SKIP---
---CLEAR SKIP---
---CLEAR SKIP---
```

4.6 Magins and Tobs Set

4.6.1 Margins

■ Mode I

ESC ℓ

Left Margin Setting

Format ESC ℓ n

BASIC CHR$(27);"ℓ";CHR$(n);

Hex 1B 6C n

Function Sets left margin.

* This command sets the first print position in the current character size.
* The valid range of "n" depends on the character size as shown below.

		Enlarged mode
Pica-size	0 ≦ n ≦ 133	0 ≦ n ≦ 67
Elite-size	0 ≦ n ≦ 159	0 ≦ n ≦ 79
Condensed	0 ≦ n ≦ 228	0 ≦ n ≦ 114
Condensed Elite-size	0 ≦ n ≦ 266 (255 max.)	0 ≦ n ≦ 134

* This command clears the horizontal TAB positions previously set and sets new
* horizontal TAB positions with the print start position set by this code.
* This code should be set at the beginning of a print line. If not, the data in the print buffer is not assured.

Example

```
1  LPRINT "*** ESC l n ***";CHR$(10);
10 FOR I=1 TO 2:LPRINT "0123456789";
20 NEXT:LPRINT CHR$(10);
30 FOR I=1 TO 4:READ X
40 '* SET LEFT MARGIN *
50 LPRINT CHR$(27);"l";CHR$(X);

COLUMN HEAD
     COLUMN HEAD
   COLUMN HEAD
```

ESC Q

Right Margin Setting

Format ESC Q n

BASIC CHR$(27); "Q"; CHR$(n);

Hex 1B 51 n

Function Sets right margin.

* * When this command is received, "n"th print position from the absolute home * position is set as a right margin in the current character mode.
* * The valid range of "n" depends on the character size as shown below.

		Enlarged mode
Pica-size	2 = LM + n = 136	1 = LM + n = 68
Elite-size	3 = LM + n = 162	2 = LM + n = 81
Condensed	4 = LM + n = 232	2 = LM + n = 116
Condensed Elite-size	4 = LM + n = 272 (255 max.)	2 = LM + n = 136

LM : Left margin

* This code should be set at the beginning of a print line. If not, the data already stored in the print buffer is not assured.

Example

```
1  LPRINT "*** ESC Q n ***";CHR$(10);
10 GOSUB 60:LPRINT CHR$(10);CHR$(10);
20 '* SET RIGHT MARGIN *
30 LPRINT CHR$(27);"Q";CHR$(10);
40 GOSUB 60
50 END
60 FOR I=1 TO 3
70 LPRINT "1234567890";
80 NEXT:RETURN
```

```
*** ESC Q n ***
12345678901234567890123456789O

1234567890
1234567890
1234567890
```

HT

Horizontal TAB Execution

Format HT

BASIC CHR$(9)

Hex 09

Function

■ Mode I

Moves the print position horizontally to the next TAB stop position previously set by an ESC D sequence, after printing all the data stored in the print buffer.

* The TABs are set every 8 positions in Pica size automatically at power on.
* When the left margin is shifted by ESC ℓ code, the horizontal TAB positions are also shifted correspondingly.
* Since horizontal TAB positions have been set as absolute values, they are not changed even if another printing pitch is selected.
* A sequence of n HT codes moves the print position n horizontal TAB positions.

■ Mode II

Moves the print position horizontally to the next TAB stop position previously set by an ESC D sequence.

* The TABs are set every 8 positions in Pica size automatically at power on.
* Since horizontal TAB positions have been set not as absolute values but by the number of characters, they are changed depending upon the character size selected.
* A sequence of n HT codes moves the print position n horizontal TAB positions.

Example

```
1  LPRINT "*** HT ***";CHR$(10);
10 LPRINT "H-TAB1";"H-TAB2";"H-TAB3";
20 LPRINT CHR$(10);
30 LPRINT "* SET H-TAB *";CHR$(10);
40 LPRINT CHR$(9);"H-TAB1";
50 LPRINT CHR$(9);"H-TAB2";
60 LPRINT CHR$(9);"H-TAB3";CHR$(13);CHR$(10);
70 END
```

```
*** HT ***
H-TAB1H-TAB2H-TAB3
* SET H-TAB *
        H-TAB1   H-TAB2   H-TAB3
```

ESC B

Vertical TAB Setting

Format ESC B n_1 n_2 ... n_k NUL ($1 \leqq n \leqq 255$) ($1 \leqq k \leqq 16$)

BASIC CHR$(27);"B";CHR$(n_1);CHR$($n_2$); ... CHR$(n_k);CHR$(0);

Hex 1B 42 n_1 n_2 ... n_k 00

Function Sets Vertical TAB positions in line units.

* This command sets vertical TAB stop positions up to 16 at each "n"th print line.
* TAB positions must be set in an ascending order. If not, the setting is terminated.
* This TAB setting is terminated when a NUL code is received or "k" exceeds 16.
* Since the vertical TAB positions are stored absolute values obtained by multiplying the number of lines by the current line spacing, they are kept unchanged even if the line spacing is modified after this setting.

Example

```
1   LPRINT "*** ESC B nk 0 ***";CHR$(10);
10  '* SET PAGE LENGTH *
20  LPRINT CHR$(27);"C";CHR$(10);
30  '* SET VERTICAL TAB POSITION *
40  LPRINT CHR$(27);"B";CHR$(3);CHR$(8);
50  LPRINT CHR$(10);CHR$(0);
60  FOR N=1 TO 3
70  LPRINT CHR$(11);"--- V-TAB";N;"---";
80  NEXT
90  LPRINT CHR$(11);"--- NEXT PAGE ---";
100 END
```

```
*** ESC B nk 0 ***

--- V-TAB 1 ---

--- V-TAB 2 ---

--- V-TAB 3 ---

--- NEXT PAGE ---
```

VT

Vertical TAB

Format VT

BASIC CHR$(11)

Hex 08

Function

■ Mode I

Feeds the form to the next vertical TAB position previously set by an ESC B sequence, after printing all the data stored in the print buffer.

* When the printer is initialized or given ESC @, VT = LF = 1/6 inch.
* If the specified VT amount is equal to or greater than the remaining page length, the form advances to the top of the next page.
* If no vertical TAB positions have been set, this code is functionally equivalent to an LF code.
* This code clears the Enlarged character mode set by SO code.
* A sequence of n VT codes advances the form n vertical TAB positions.

■ Mode II

Functionally equivalent to LF code.

Example

```
1  LPRINT "*** VT ***";CHR$(10);
10 '* SET VERTICAL TAB POSITION *
20 LPRINT CHR$(27);"B";
30 LPRINT CHR$(3);CHR$(7);CHR$(12);CHR$(0);
40 FOR N=1 TO 3
50 '* SET VT CODE *
60 LPRINT CHR$(11);"--- VT";N;"---";
70 NEXT
80 END
```

```
*** VT ***

--- VT 1 ---

--- VT 2 ---

--- VT 3 ---
```

ESC b

Set VFU Position

Format ESC b n m_1 m_2 ... m_k NUL

n : Channel number ($0 \leqq n \leqq 7$)
m : Position number ($1 \leqq k \leqq 16$)

BASIC CHR$(27);"b";CHR$(n);CHR$($m_1$);CHR$(m_2) ... CHR$(mk);CHR$(00);

Hex 1B 62 n m_1 m_2 ... m_k 00

Function Sets "m"th position on the "n"th channel of the VFU (Vertical Format Unit).

* Channel 0 is automatically selected at power on.
* This setting is the same as that of ESC B.
* Channel 0 can also be set by ESC B.
* "m_i" sequence is terminated by NUL code (i=1 ... k) or m_{16}.

NOTE VFU (Vertical Format Unit) means independent TAB setting for each channel which controls a format. For example, VT for designated channels — such as 3, 5 and 15 lines for channel 1 and 5, 10 and 30 lines for channel 2 — is possible.

Example

```
1   LPRINT "*** ESC b n mk 0 ***";CHR$(10);
10  '* SET PAGE LENGTH *
20  LPRINT CHR$(27);"C";CHR$(10);
30  '* SET VFU POSITION *
40  LPRINT CHR$(27);"b";CHR$(3);
50  LPRINT CHR$(3);CHR$(5);CHR$(10);CHR$(0);
60  '* SELECT VFU CHANNEL 3 *
70  LPRINT CHR$(27);"/";CHR$(3);
80  LPRINT "0th line";CHR$(11);
90  LPRINT "3rd line---VT 1";CHR$(11);
100 LPRINT "5th line---VT 2";CHR$(11);
110 LPRINT "10th line---VT 3";CHR$(11);

10th line---VT 3
```

ESC /

Select VFU Channel

Format ESC / n (0 ≦ n ≦ 7)

BASIC CHR$(27);"/";CHR$(n);

Hex 1B 2F n

Function Designates that a later VT is to be carried out according to VFU (Vertical Format Unit) channel n.

* TAB positions to be executed by this command must be previously set by ESC b sequence.
* This command and ESC B can not concur.

Example

```
1   LPRINT "*** ESC / n ***"; CHR$(10);
10  '* SET PAGE LENGTH *
20  LPRINT CHR$(27);"C";CHR$(10);
30  '* SET CHANNEL 1 VFU POSITION *
40  LPRINT CHR$(27);"b";CHR$(1);
50  LPRINT CHR$(3);CHR$(7);CHR$(9);CHR$(0);

4.7 Bit Image Control

ESC K

Standard Density Bit Image Mode

Format ESC K n_1 n_2 $(1 \leqq n_1 + 256 \times n_2 \leqq 816)$

BASIC CHR$(27);"K";CHR$(n_1);CHR$($n_2$);
CHR$($d_1$);CHR$(d_2); ... CHR$(dn);

Hex 1B 4B n_1 n_2 d_1 d_2 ... dn

Function ■ Mode I ■ Mode II

Sets Standard (single) density bit image print mode.

* n_1 and n_2 are the number of columns of bit image data to be sent following the ESC K n_1 n_2. n_1 and n_2 are each 1 byte of data. n_1 is the lower byte, and n_2 is the upper byte.

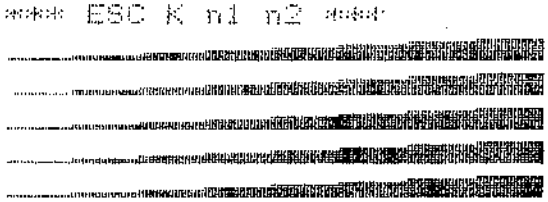
  For example, if the number of bit image data is "a", n_1 is a remainder of "a" divided by 256. n_2 is the quotient.

* The maximum number of columns of bit image data printable on one line is 816. If the number of dot positions exceeds 816, excess image data is ignored.
* Both characters and bit image data can be printed on the same line.
* On completion of the bit image print, the printer automatically turns to the text print mode.
* n_1 and n_2 should be defined in the range, $1 \leqq$ number of columns of bit image data $\leqq n_1 + 256 \times n_2 \leqq 816$. For the line including and text data, see Note 2.

Example

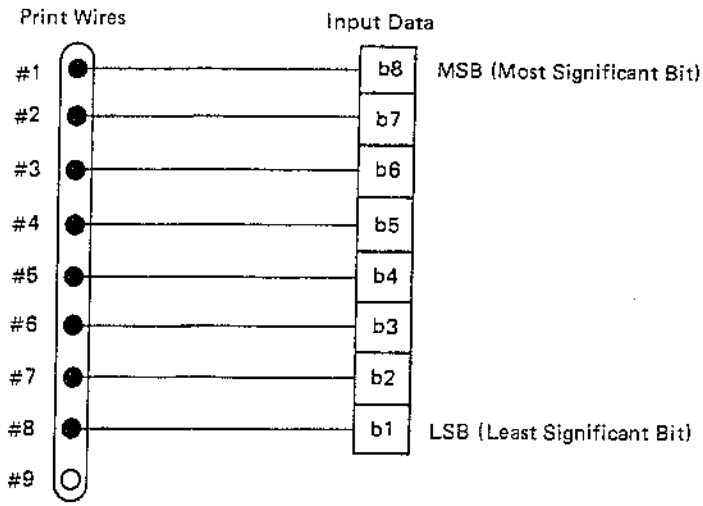
```
1   LPRINT "*** ESC K n1 n2 ***";CHR$(10);
10  FOR I=1 TO 5
20  '* STANDARD DENSITY BIT IMAGE MODE *
30  LPRINT CHR$(27);"K";CHR$(160);CHR$(0);
40  FOR J=1 TO 8
50  FOR K=1 TO 20
60  N=2^J-1
70  LPRINT CHR$(N);
80  NEXT K
90  NEXT J
100 LPRINT CHR$(10);
110 NEXT I:END
```

*** ESC K n1 n2 ***



NOTES

1. The relation of the bit image data and the print wires is as follows:



- Wire #9 is not used for bit image print.
- Each print wire is driven if the corresponding bit of the input data is "1"; not driven if "0".

2. If the text data and bit image data are to be mix printed on the same line, take the number of the printable bit images on the remaining line into consideration.

■ Mode I

	Number of bit image data/character (Columns)	Enlarged mode (Columns)
Pica-sized character Emphasized character	6	12
Condensed character	3.5	7
Elite-sized character	5	10
Condensed Elite-sized character	3	6

■ Mode II

	Number of bit image data/character (Columns)	Enlarged mode (Columns)
Normal (Pica) character Emphasized character	6	12
Condensed character	3.5	7

For example, if ten characters have been set in Normal (Pica) character mode, the number of the printable bit images on the same line is,

$$816 - 6 \times 10 = 756$$

ESC L

Double Density Bit Image Mode

Format ESC L n_1 n_2 $(1 \leqq n_1 + n_2 \times 256 \leqq 1632)$

BASIC CHR$(27);"L";CHR$(n_1);CHR$($n_2$);
CHR$($d_1$);CHR$(d_2);... CHR$(dn);

Hex 1B 4C n_1 n_2 d_1 d_2 ... dn

Function ■ Mode I ■ Mode II

Sets Double density bit image print mode.

* This mode doubles the Standard density bit image mode in horizontal density,
* providing denser graphic data print.
* The maximum number of columns of bit image data printable on one line is 1632.
* Other terms and conditions are identical to those of the ESC K command. Read 1632 for 816 in the ESC K description, and double the number of columns per character in Note 2.

Example

```
1   LPRINT "*** ESC L n1 n2 ***";CHR$(10);

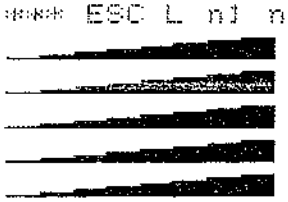
```

```
*** ESC L n1 n2 ***
```



ESC Y

Double Speed & Double Density Bit Image Mode

Format ESC Y n_1 n_2 $(1 \leqq n_1 + 256 \times n_2 \leqq 1632)$

BASIC CHR$(27);"Y";CHR$(n_1);CHR$($n_2$);
CHR$($d_1$);CHR$(d_2);... CHR$(dn);

Hex 1B 59 n_1 n_2 d_1 d_2 ... dn

Function ■ Mode I ■ Mode II

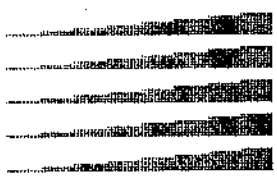
Sets Double speed & double density bit image print mode.

* This mode is identical with the mode set by ESC L sequence, except for the print speed. This command allows the printer to print the bit image data in 1/120" pitch in normal print speed, while ESC L command in reduced print speed.
* Adjoining dots are not printed.
* Other terms and conditions are identical to those of the ESC K command. Read 1632 for 816 in the ESC K description, and double the number of columns per character in Note 2.

Example

```
1   LPRINT "*** ESC Y n1 n2 ***";CHR$(10);
10  FOR I=1 TO 5
20  '* DOUBLE SPEED & DOUBLE DENSITY
    BIT IMAGE MODE *
30  LPRINT CHR$(27);"Y";CHR$(160);CHR$(0);
40  FOR J=1 TO 8
50  FOR K=1 TO 20
60  N=2^J-1
70  LPRINT CHR$(N);
80  NEXT K
90  NEXT J
100 LPRINT CHR$(10);
110 NEXT I:END
```

```
*** ESC Y n1 n2 ***
```



ESC Z

Quadruple Density Bit Image Mode

Format ESC Z n_1 n_2 $(1 \leqq n_1 + n_2 \times 256 \leqq 3264)$

BASIC CHR$(27);"Z";CHR$(n_1);CHR$($n_2$);
CHR$($d_1$);CHR$(d_2);... CHR$(dn);

Hex 1B 5A n_1 n_2 d_1 d_2 ... dn

Function ■ Mode I ■ Mode II

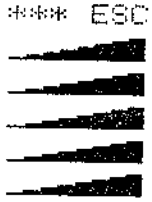
Sets Quadruple density bit image print mode.

* This mode quadruples the Standard density bit image mode in horizontal density, providing much denser graphic data print.
* The maximum number of columns of bit image data printable on one line is 3264.
* Adjoining dots are not printed.
* Other terms and conditions are identical to those of the ESC K command. Read 3264 for 816 in the ESC K description, and quadruple the number of columns per character in Note 2.

Example

```
1   LPRINT "*** ESC Z n1 n2 ***";CHR$(10);
10  FOR I=1 TO 5
20  '* QUADRUPLE DENSITY BIT IMAGE MODE *
30  LPRINT CHR$(27);"Z";CHR$(160);CHR$(0);
40  FOR J=1 TO 8
50  FOR K=1 TO 20
60  N=2^J-1
70  LPRINT CHR$(N);
80  NEXT K
90  NEXT J
100 LPRINT CHR$(10);
110 NEXT I:END
```

```
*** ESC Z n1 n2 ***
```



ESC *

Select Bit Image Mode

Format ESC * m n_1 n_2

m : Bit image select ($0 \leqq m \leqq 7$)
n : Bit image data

BASIC CHR$(27);"*";CHR$(m);CHR$($n_1$);CHR$(n_2);
CHR$($d_1$);CHR$(d_2); ... CHR$(dn);

Hex 1B 2A m n_1 n_2 d_1 d_2 ... dn

Function ■ Mode I ■ Mode II

Selects bit image print mode depending on the value of "m".

m	Mode	Dots/line (13.6")	Horizontal Pitch	Codes functionally equivalent
0	Standard density	816	1/60	ESC K
1	Double density	1632	1/120	ESC L
2	Double-speed Double-density	1632	1/120	ESC Y
3	Quadruple density	3264	1/240	ESC Z
4	CRT graphic I	1088	1/80	–
5	Plotter graphic I	978	1/72	–
6	CRT graphic II	1224	1/90	–
7	Plotter graphic II	1956	1/144	–

* For n_1 and n_2, refer to ESC K description.
* In the above table, densities selected by m = 0 – 3 are compatible with the printer's print pitch. Densities by m = 4 and 6 are compatible with CRT densities, which are suitable for hard copy of CRT.
* If m = 2 or 3, adjoining dots are not printed.

Example

```
1   LPRINT "*** ESC * m n1 n2 ***";CHR$(10);
10  FOR M=0 TO 7
20  LPRINT "m=";M;CHR$(10);
30  '* SELECT BIT IMAGE MODE *
40  LPRINT CHR$(27);"*";CHR$(M);CHR$(240);
    CHR$(0);
50  FOR I=1 TO 8
60  N=2^I-1
70  FOR J=1 TO 30
80  LPRINT CHR$(N);
90  NEXT J:NEXT I:LPRINT CHR$(10);
100 NEXT M:END
```

```
*** ESC * m n1 n2 ***
m= 0
m= 1
m= 2
m= 3
m= 4
m= 5
m= 6
m= 7
```

ESC ?

Translate Bit Image Density

Format ESC ? n m

n = K, L, Y, Z
0 ≦ m ≦ 7

BASIC CHR$(27);"?";CHR$(n);CHR$(m);

Hex 1B 3F n m

Function ■ Mode I ■ Mode II

Translates the graphic density of the bit image mode accessed by ESC K, ESC L, ESC Y, or ESC Z to a graphic density specified by the bit image mode selection command, ESC *.

* At power on,

  ESC K defaults to ESC * 0.
  ESC L defaults to ESC * 1.
  ESC Y defaults to ESC * 2.
  ESC Z defaults to ESC * 3.

* For example, to translate the graphic density of ESC K to the graphic density of ESC * 6 n_1 n_2, input ESC ? K 6. (i.e., CHR$(27);"?";"K";CHR$(6);)
* This density remains in effect until a new one is specified.

Example

```
1   LPRINT "*** ESC ? n m ***";CHR$(10);
10  LPRINT
20  GOSUB 90
30  LPRINT
40  LPRINT "* TRANSLATE BIT IMAGE DENSITY *";
    CHR$(10);
50  LPRINT CHR$(27);"?";"K";CHR$(1);
60  LPRINT
70  GOSUB 90
80  END
90  LPRINT CHR$(27);"K";CHR$(160);CHR$(0);
100 FOR J=1 TO 8:FOR K=1 TO 20
110 N=2^J-1:LPRINT CHR$(N);
120 NEXT K:NEXT J:LPRINT CHR$(10);
130 RETURN
```

```
*** ESC ? n m ***

* TRANSLATE BIT IMAGE DENSITY *
```

ESC ^

9-Pin Bit Image Mode

Format ESC ^ m n_1 n_2

m = 0 : Standard density
m = 1 : Double density

BASIC CHR$(27);"^";CHR$(m);CHR$($n_1$);CHR$(n_2);
CHR$($d_1$);CHR$(d_2);... CHR$(dn);

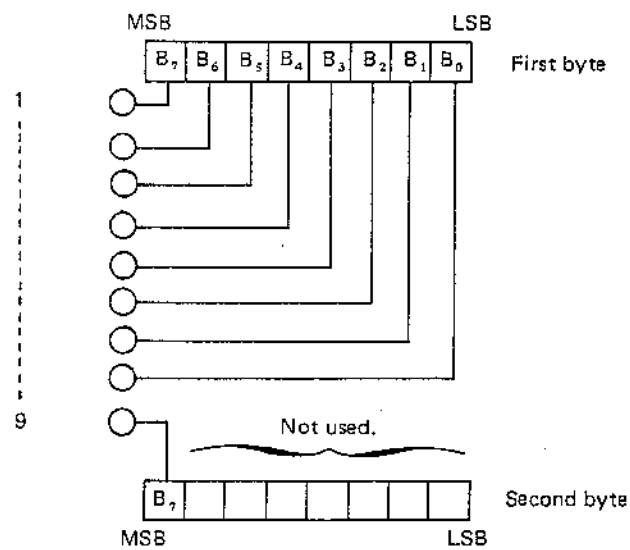
Hex 1B 5E m n_1 n_2 d_1 d_2 ... dn

Function ■ Mode I ■ Mode II

Sets 9-pin bit image print mode.

* After receiving this command, the printer prints bit image at 9 dots/column,
* in standard (m = 0) or double (m = 1) density.
* On completion of the bit image print, the printer automatically turns to the text
* print mode.
* For n_1 and n_2, refer to ESC K description.

Pin No.



* One bit image column is formed by two bytes as shown above. Only MSB is used in the second byte.
The number of bytes is equal to (n_1 + n_2 x 256) x 2.

Example

```
1   LPRINT "*** ESC ^ m n1 n2 ***";CHR$(10);
10  LPRINT "--STANDARD DENSITY--"
20  M=0
30  GOSUB 100
40  LPRINT
50  LPRINT
60  LPRINT "--DOUBLE DENSITY--"
70  M=1
80  GOSUB 100
90  END
100 FOR A=1 TO 10
110 LPRINT CHR$(27);"^";CHR$(M);CHR$(10);CHR$(0);
120 LPRINT CHR$(8);CHR$(128);CHR$(20);CHR$(0);
130 LPRINT CHR$(34);CHR$(128);CHR$(65);CHR$(0);
140 LPRINT CHR$(128);CHR$(128);CHR$(65);CHR$(0);
150 LPRINT CHR$(34);CHR$(128);CHR$(20);CHR$(0);
160 LPRINT CHR$(8);CHR$(128);CHR$(0);CHR$(0);
170 NEXT A
180 RETURN
```

```
*** ESC ^ m n1 n2 ***
--STANDARD DENSITY--

Chapter 6. MAINTENANCE

6.1 Proper Care of Printer

To keep your printer in good working condition, pay attention to the following points:

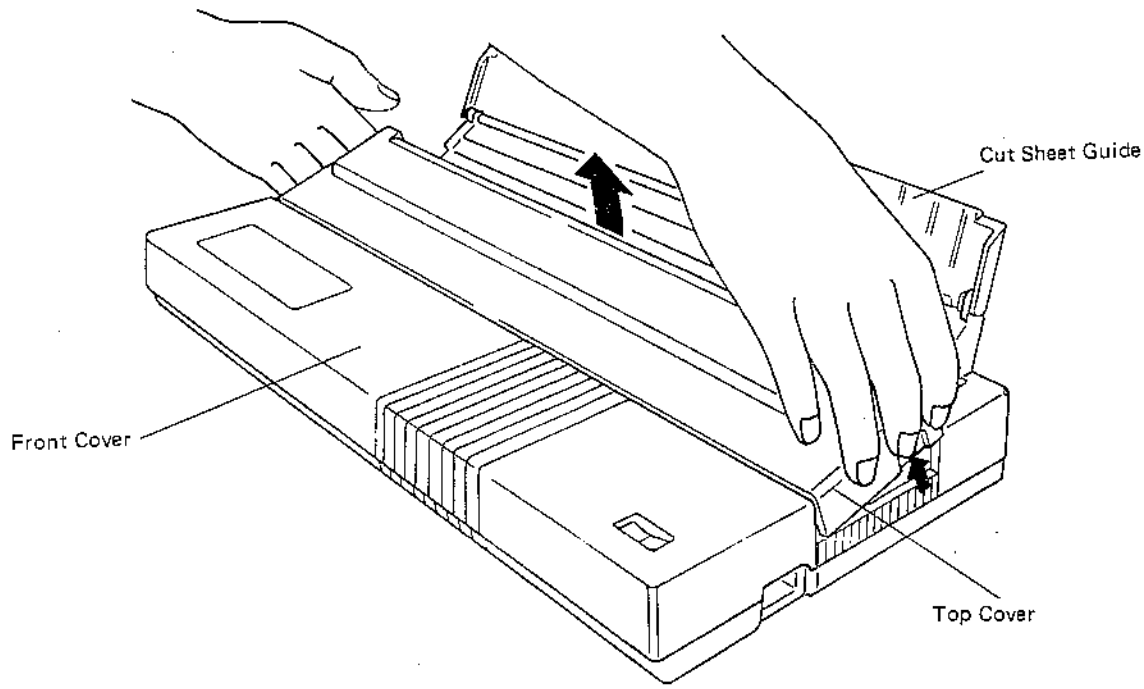
- Clean the printer with a soft brush at least every three months, to remove the paper particles and dust.
- If the exterior of the printer is smudged, use a cloth which has been dampened with a mild detergent and water solution. Never use alcohol, thinner or other organic solvents.
- Do not let clips or other metal objects drop in the printer as they could cause malfunctions.

6.2 Replacing Print Head

In case of print head trouble or a worn dot wire, replace the print head as follows:

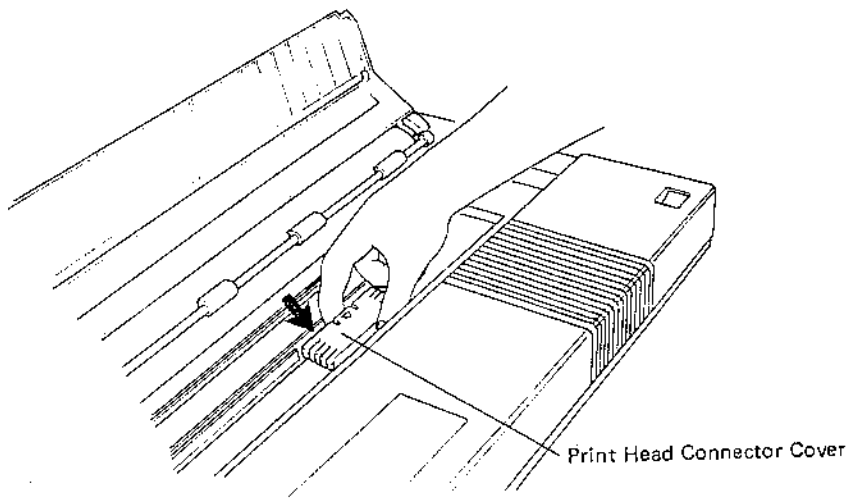
■ Removal

(1) Unplug the printer power cord from the AC outlet.
(2) Make sure that the print head has cooled enough to touch it.
(3) Open the cut sheet guide.
(4) Pull and detach the top cover, putting your hands on both sides. Take care not to pull the window cover by force; otherwise it may be broken.

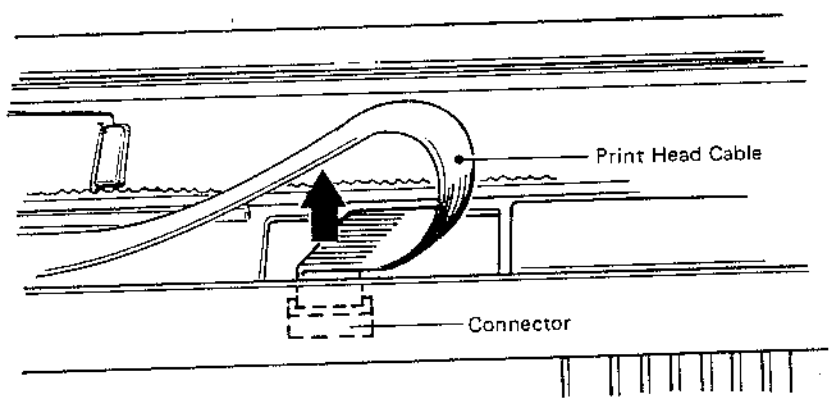


(5) Take off the ribbon cassette. (Refer to Sec. 2.1.)
(6) Move the carriage to the left from the center of the frame unit.

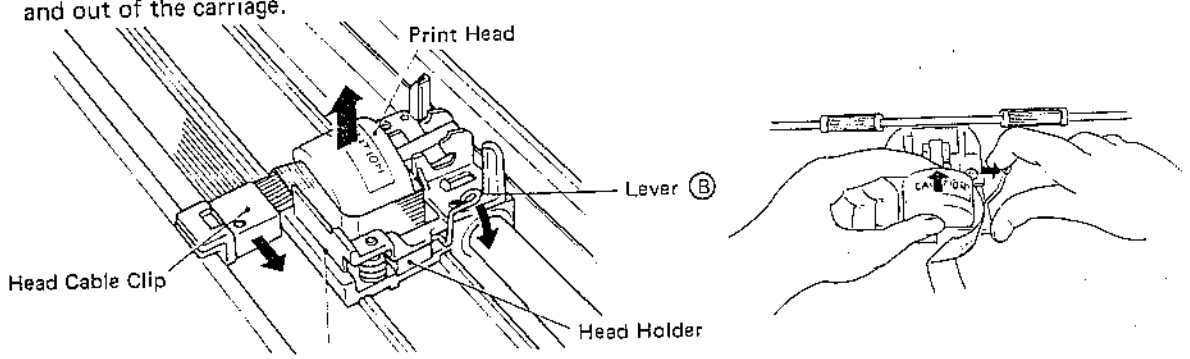
(7) By pushing the print head connector cover in the direction of an arrow to unlatch the pawl, remove the head connector cover.



(8) Pull out the print head cable from the connector on the P.C.B.



(9) Slide the head cable clip to the right and remove it.
(10) Pushing the lever Ⓑ outward with your thumb to release the head holder, hold the print head up and out of the carriage.

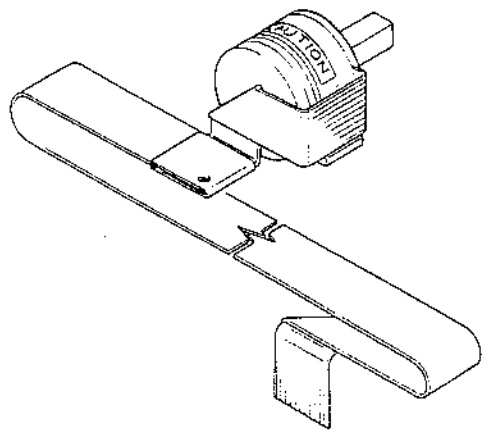


(11) Taking care not to damage the head cable, take the print head out of the printer.

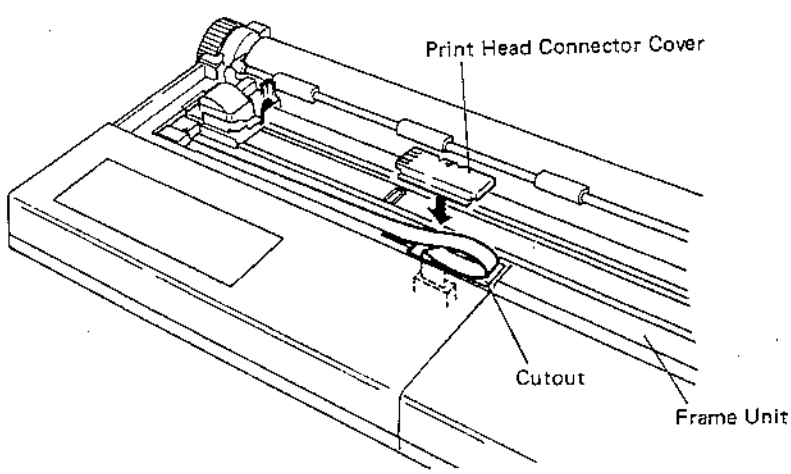
■ Installation

Install a new print head in the reverse sequence of the removal procedure.

- While pushing the print head toward the front of the printer, mount the print head on the carriage.
- Make sure that the head cable is arranged as illustrated below.



- After mounting the print head on the carriage and inserting the head cable into the connector on the P.C.B., move the carriage to the leftmost position and remove the excessive cable slack by putting the excess of the cable into the cutout of the frame unit. Then install the print head connector cover.



- After the installation, be sure to adjust the gap between the print head and the platen, following instructions described on page 14.

APPENDICES

A. Specifications

■ PRINTING

Print Method	Impact dot matrix	
Number of Pins	9	
Print Speed	180 cps (in Pica Draft mode)	
Print Head Service Life	Approx. 200 million dots/pin	
Dot Configuration		
Dot Diameter	0.29 mm	
Dot Pitch		
Vertical	1/72 inch	
Horizontal	1/60 inch (Pica) 1/72 inch (Elite)	240 × 215 ↑
Character Formation (Standard)		
Vertical	7 dots	
Horizontal	9 dots (including half dot)	
Character Sets	ASCII 96 characters, 43 national characters (12 countries), 133 IBM PC characters	
No. of Characters per Line (No. of Characters per Inch)		
Pica	Normal:	136 (10 cpi)
	Enlarged:	68 (5 cpi)
	Emphasized:	136 (10 cpi)
Elite	Normal:	162 (12 cpi)
	Enlarged:	81 (6 cpi)
Condensed Pica	Standard:	232 (17 cpi)
	Enlarged	116 (8.5 cpi)
Condensed Elite	Standard:	272 (20 cpi)
Print Direction	* Bidirectional logic seeking * Unidirectional (in graphic programmable)	
No. of Lines per Minute	Approx. 50 (Full line test print of Alphanumerics in 1/6" line feed pitch, in Pica Draft mode.)	
Copy Capability	3 copies including an original	
Noise Level	55 dB	

■ PAPER FEED MECHANISM

Paper Feed Method	• Friction Feed (cut forms) • Pin feed push-tractor system (continuous forms) • Optional sheet feeders for cut forms
Line Feed Pitch	1/6", 1/8" (selectable by DIP SW), n/72" or 1/216 x N inch programmed pitch
Forms	
Cut Forms	
Width	101.6 – 420 mm (4 – 16.5")
Thickness	0.06 – 0.1 mm
Ream Weight	45 – 70 kg
Continuous Forms	
Width	127.6 – 406.4 mm (4 – 16 inches)
Ream Weight	45 – 60 kg (single-part) 34 kg (three-part)

■ INK RIBBON

Type	Stationary cassette
Size	10 mm wide, 25 m long
Color	Black
Service Life	2.5 million characters

■ INTERFACE

- Centronics parallel interface
- RS-232C serial interface

■ EXTERNAL DIMENSIONS AND WEIGHT

Dimensions (W x D x H)	490 x 238 x 76 mm (490 x 305 x 76 mm if Pin Wheel Unit is installed.)
Weight	Approx. 6 kg (Approx. 6.7 kg if Pin Wheel Unit is installed.)

⁎ POWER REQUIREMENTS AND ENVIRONMENTAL CONDITIONS

Source Voltage	115 ± 10 % VAC, 220 ± 10 % VAC or 240 ± 10 % VAC	
Frequency	50/60 ± 2 % Hz	
Power Consumption	100 VA max. while operating 30 VA while idling	
Temperature and Humidity		
	Temperature	Humidity
Operating	5 to 35°C	20–80 %
Non-operating	0 to 50°C	10–80 %
Storage	−20 to 60°C	5–95 %
	(with no dew condensation.)	

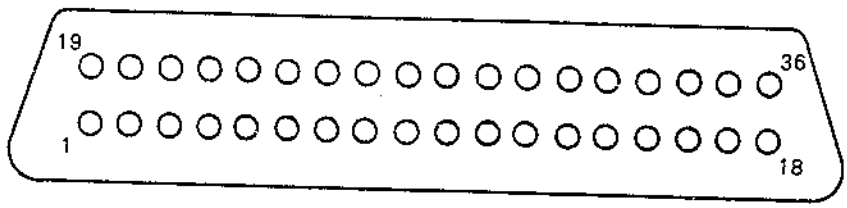
B. Interface

1. Parallel Interface (Centronics)

(1) Interface Connectors

Printer Side : Amphenol 57LE-40360 or equivalent
Cable Side : Amphenol 57FE-30360 or equivalent

Shielded cable (twisted pair cable) shall be used.
Cable Length: 1.9 m (6 feet) max.



(2) Pin Assignment

Pin No.	Signal	Pin No.	Signal
1	$\overline{\text{DATA STROBE}}$	19	GND
2	DATA 1	20	
3	DATA 2	21	
4	DATA 3	22	
5	DATA 4	23	
6	DATA 5	24	
7	DATA 6	25	
8	DATA 7	26	
9	DATA 8	27	
10	ACKNLG	28	
11	BUSY	29	
12	PE	30	$\overline{\text{INPUT PRIME RET}}$
13	+5V (4.7 kΩ pull-up)	31	$\overline{\text{INPUT PRIME}}$
14	$\overline{\text{AUTO FEED}}$	32	$\overline{\text{FAULT}}$
15	Not used.	33	0V
16	0V	34	Not used.
17	0V	35	+5V (4.7 kΩ pull-up)
18	+5V	36	$\overline{\text{SLCT IN}}$

(3) Signal Description

Pin No.	Signal Name	IN/OUT	Explanation
1	$\overline{\text{DATA STROBE}}$	IN	Data reading strobe pulse whose minimum width shall be 1 μs. High in steady state. Data is read on the leading edge of this signal going Low.
2-9	DATA 1-8	IN	Bit 1 through bit 8 of the data. The level is High for 1 and Low for 0. The minimum width shall be 3 μs.
10	$\overline{\text{ACKNLG}}$	OUT	Acknowledge pulse that is output upon completion of data input or upon completion of printer operation. The pulse width is 6 μs.
11	BUSY	OUT	Signal to indicate if the printer is data receivable. Data input is possible when this signal is Low. This signal goes High under any of the following conditions: – During printer operation – During data input – In offline (DESELECT) state
12	PE	OUT	DC level signal that goes High when the paper empty state is detected.
13, 35	+5V	OUT	Pulled up to +5V by 4.7 kΩ resistor.
14	$\overline{\text{AUTO FEED}}$	IN	When this signal goes Low, the printer automatically feeds paper by one line after printing.
18	+5V Source	OUT	Output max. 300 mA
31	$\overline{\text{INPUT PRIME}}$	IN	When this signal goes Low, the printer is reset to the initial state.
32	$\overline{\text{FAULT}}$	OUT	DC level signal that goes Low when the printer is in the offline state.
36	$\overline{\text{SLCT IN}}$	IN	Turning this signal Low enters the printer into online state; High, offline state, if no error is detected in the printer. When the DIP SW3-7 is set to OFF, the printer may receive but ignore the data being sent from the computer, resulting in no operation. If this signal is low, the data are always valid regardless of the device control codes and the mode state. But if high, they are valid only when the DC1 code is input under MODE I. See the description of the DIP switch.

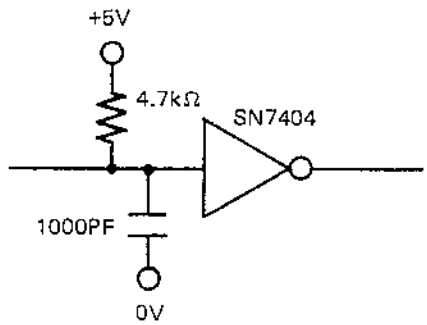
(4) Interface Circuit

Signals of the interface line are compatible to TTL level. The input and output levels are as follows at TTL I/O pins.

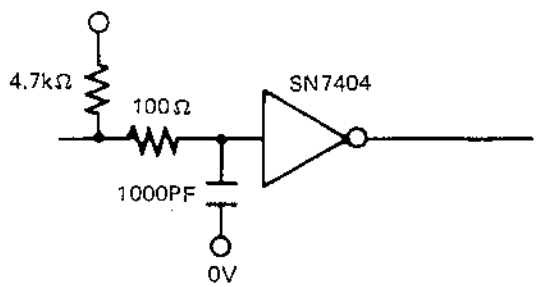
	LOW level (V)	HIGH level (V)
Input	$0 \leqq V \leqq 0.4$	$2.4 \leqq V \leqq 5.0$
Output	$0 \leqq V \leqq 0.4$	$2.4 \leqq V \leqq 5.0$

(a) Input Circuits

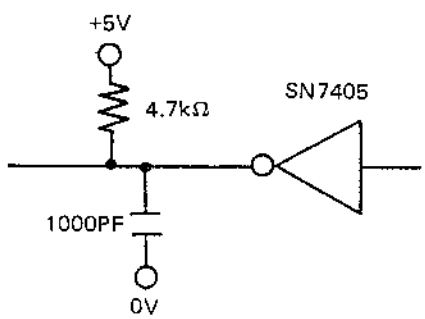
DATA 1-8



$\overline{\text{DATA STROBE}}$
$\overline{\text{INPUT PRIME}}$

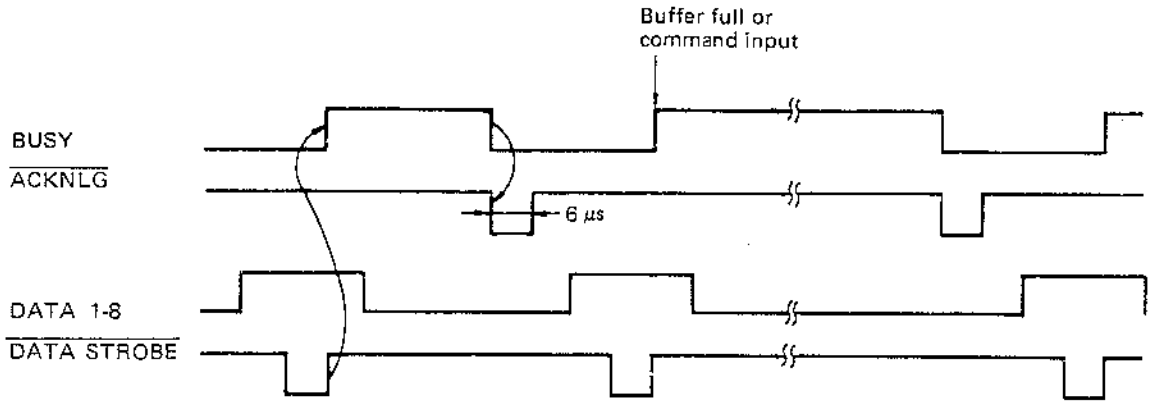


(b) Output Circuits

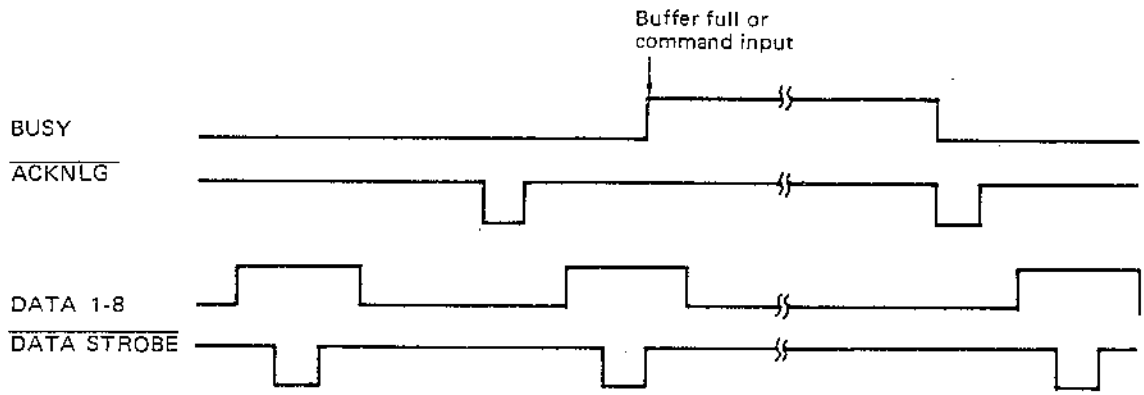


(5) Timing Charts

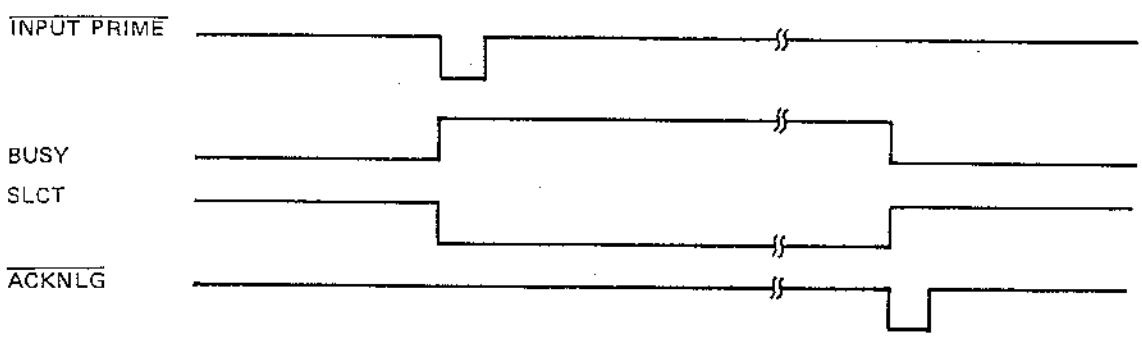
1) Data receiving under one-data BUSY condition



2) Data receiving under one-line BUSY condition



3) Receiving $\overline{\text{INPUT PRIME}}$

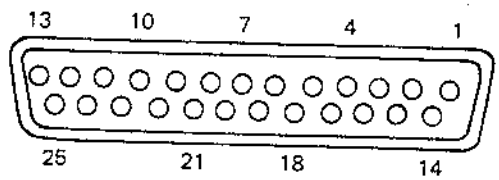


2. Serial Interface (RS-232C)

(1) Interface Connectors

Printer Side : Amphenol 17LE-13250 or equivalent
Cable Side : Amphenol 17JE-23250 or equivalent

Shielded cable shall be used.
Cable Length: 2 m (6.5 feet) max.



(2) Pin Assignment

Pin No.	Signal	IN/OUT Printer Controller	Pin No.	Signal	IN/OUT Printer Controller
1	FG		14	SCA	→
2	SD	→	15	NC	
3	RD	←	16	NC	
4	RTS	→	17*	Current loop (DTR)	→
5	CTS	←	18	NC	
6	DSR	←	19	NC	
7	SG		20	DTR	→
8	CD	←	21	NC	
9	NC		22	NC	
10	NC		23*	Current loop (RP) RET	
11	SCA	→	24*	Current loop (DTR) RET	
12	NC		25*	Current loop (RP)	←
13	NC				

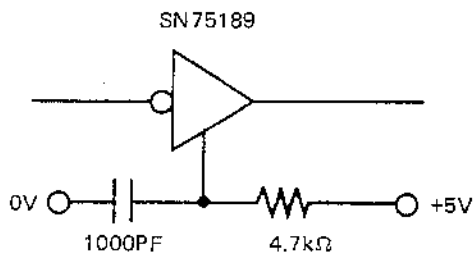
NOTE*: The signals of pin No. 17, 23, 24, and 25 are optionally available.

(3) Signal Description

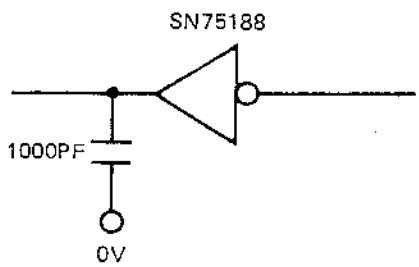
Signal Name	IN/OUT	Explanation
FG	–	Frame Ground (protective GND)
SD	OUT	Send Data
RD	IN	Receive Data
RTS	OUT	Request to Send
CTS	IN	Clear to Send
DSR	IN	Data Set Ready
SG	–	Signal Ground
CD	IN	Carrier Detect
SCA	OUT	Secondary Request to Send
DTR	OUT	Data Terminal Ready

(4) Interface Circuit

a) Input Circuit

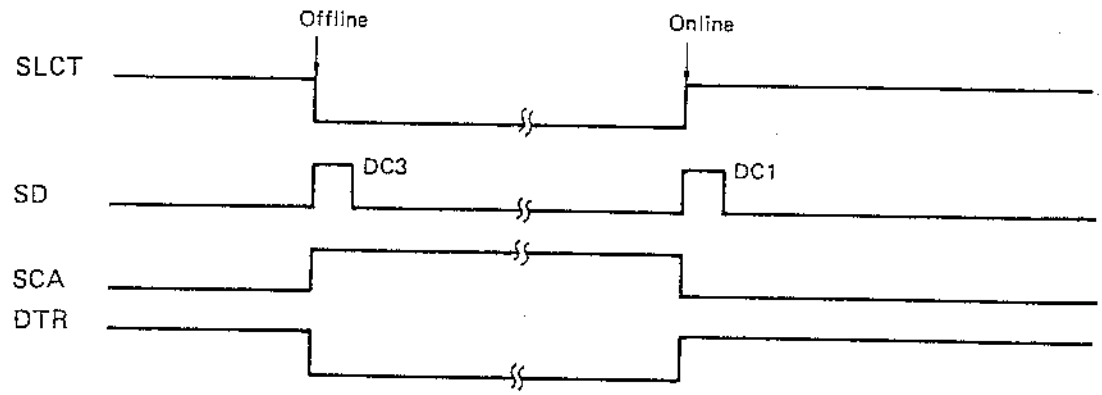


4) Output Circuit

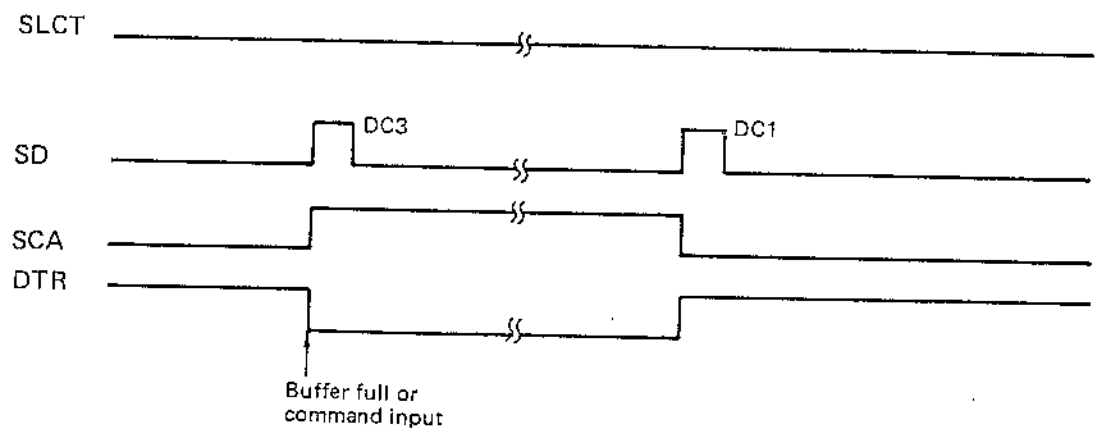


(5) Timing Charts

1) Turning to offline and online modes



2) Data receiving



- **X-ON/OFF Control**

When the printer is receiving data into the input buffer, X-OFF (DC3 code) is transmitted from SD if the input data accounts for 3056 bytes minimum of the input buffer; X-ON (DC1 code), 153 bytes maximum by data transfer to the image buffer.

(6) Standard Specification

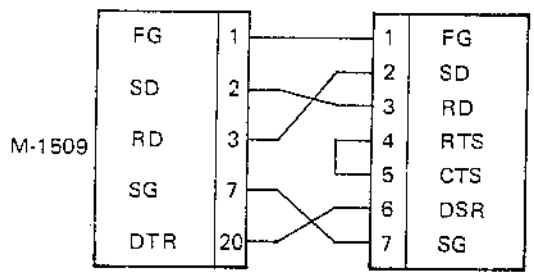
1) Band rate
   110, 150, 300, 600, 1200, 2400, 4800, 9600 bauds
2) Synchronization
   Start-stop
3) Communication control procedure
   No procedure
4) Data format
   9, 10 bits/character or 11 bits/character
   7 bit or 8 bit serial:
   1 Start bit, Data bits (7 or 8), Party bit (0 or 1), Stop bit (1 or 2)
   See DIP SW1 WORD TABLE.

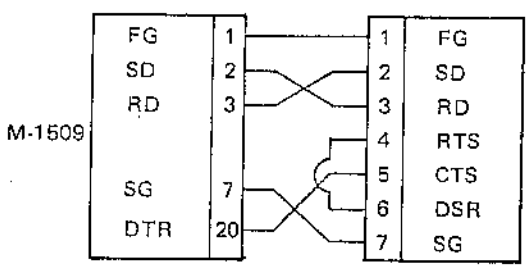
(7) Signal Level

Logic	Nominal output voltage	Receiving-end voltage
MARK (OFF)	−12V	Less than −3V
SPACE (ON)	+12V	More than +3V

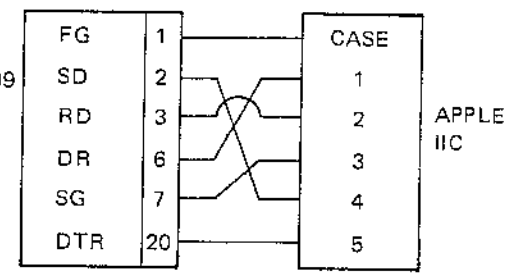
(8) Pin Configuration

1) IBM-PC & PCJr. (Example)

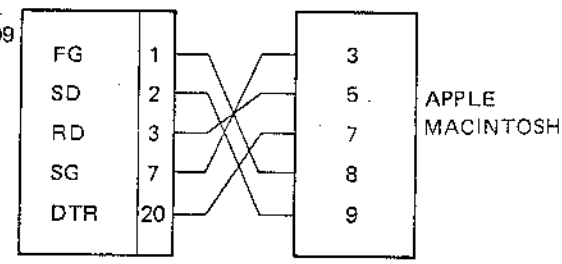




2) APPLE IIC (Example)



3) APPLE MACINTOSH (Example)



C. Options

The following accessories are available as options.

(1) SF-40 Cut Sheet Feeder (1 bin for forms)

(2) Near Letter Quality (NLQ) Fonts P.C.B.

LQ100 : Gothic, Quadro, and Anelia Proportional

LQ200 : Gothic, Anelia Proportional, and 16K input/download buffer

NOTE The character generators for the normal (Pica) and Prestige (NLQ) are built in the Logic Control P.C.B.

(3) Dustproof Cover

(These options are to be released in the near future.)
